KAYIN ***

TASK OF KAYIN

By WILLIAM MORRISON

*From out beyond the second sun he came; a fugitive from
a dead and sterile world ... seeking solace, friends, a
home, on Earth—a planet of even greater terrors.*

**[Transcriber's Note: This etext was produced from
Planet Stories July 1953.**

**Extensive research did not uncover any evidence that
the U.S. copyright on this publication was renewed.]**

The sensation of which he was most conscious was that of loneliness. He was no longer very much afraid, and sometimes he even thought that his enemies back home were no longer hunting for him. But in the midst of these strange creatures he learned that there was one thing worse than open hostility, and that was indifference. They had no more interest in him than they had in each other, and even though their indifference increased his own chances for safety, it was a chilling thing none the less.

He knew that though they were like him superficially, they were intensely different within. He stood at a street corner trying to fathom the difference, while the crowds surged about him, buffeting him from side to side. They seemed to have no idea of personal dignity. He still understood their language only imperfectly, and spoke it with difficulty, but he had learned, in a primitive way, to read their faces, and during this time of day, at least, their faces told of a strain and fear all their own, of an uncertainty even greater than his. They were going home from work, and they were afraid of countless trifles—that something unpleasant might happen, that they might not get seats on their conveyances, that bad news might greet them when they arrived.

He stared with fascination at a heap of newspapers spread out on the corner stand. He could guess the purpose of these layers of white sheets covered with black or red symbols, but he could not yet interpret them, and he had no idea whether any one had seen or reported his ship. It was almost certain that some one had observed a shooting star, but the chances were very much against any observation having been made of the star's slow, dark drift to earth. At any rate, he had concealed his ship among the growth of tall native plants, and some day he would find time to repair the relatively minor damage he had sustained, and continue his journey.

Meanwhile, he had to make up his mind what to do here. His original store of food had been exhausted a week before as these creatures counted time, and despite the fact that his metabolic requirements were low, he had long needed to eat again. The food that was exhibited in many stores was of a kind strange to him, but from the very structure and behavior of individuals who ate it, he knew that it was of the right chemical composition. Examining it cautiously with a small analyzer held close to his eye, he

noted that at least it contained none of the more dangerous poisons. It would do, if he could obtain it.

But he must obtain it in a manner that these creatures considered legal, not as he had obtained his clothes. He recalled how absurdly different his own clothes had been, constructed to fit a creature whose morphology was so much unlike theirs. He had taken over a suit from a man he had met driving on a dark country road, not too close to the ship. He had stopped the car and put the man to sleep without difficulty, but there must have been a great outcry after his victim had awakened to find himself cold and naked in the driver's seat.

He hadn't minded, for he had already left the place where the incident had occurred. But he wanted no hue and cry raised here. Although under other conditions he would have minded their hostility no more than their indifference, he knew that hostility now might very seriously limit his freedom to act.

He listed the things he had to do. He had to find food and shelter, learn their language and customs, and as quickly as possible, their alphabet. He had to acquire their manner of thought and feeling so well that he could blend with them not only superficially, but psychologically as well. He had to—

A rough shoulder caught him on the chest and spun him half around. A rough voice, more a snarl than anything else, said, "Whatsa matter, ya blind?"

The way the words were run together confused him, but he had listened keenly, and he knew the phrase that was required in such situations. He said politely, but almost unintelligently, "Excuse. I sorry."

"Foreigner, huh? Why don't ya go back where ya came from?"

This was the first person who had spoken to him in his new world. The encounter left him angry and contemptuous, but it was not to be long before he learned that the individual he had been privileged to meet was not wholly typical.

He moved along, alert to observe and to learn, but entirely without aim so far as an ultimate destination was concerned. He noted that the nature of the streets he traversed changed subtly with every intersection. The primitive, but well constructed buildings that had lined them soon gave way to even more primitive, dilapidated, and filthy structures. It was clear that they had rich and poor here, and that he was approaching the dwellings of the poor.

He heard a rhythmic sound in the street, as of a percussion instrument, and following it, found a female of the prevailing species, dressed somewhat differently from the other females, and pounding on a hollow cylinder of fairly large diameter. Other, more piercing instruments, added sounds of their own, and then voices were lifted in song. He lingered, fascinated, and wished only that he had a sound-recorder to take permanent note of the strange music.

He was not the only one who lingered. Half a dozen dilapidated males had gathered, attracted like him by the rhythmic noise, and after a female had ended a strange exhortation which he did not fully understand, they all followed the company of musicians into a ramshackle building. Inside, he listened to other exhortations, and then had food thrust upon him.

It was a bowl of soup, the first nutrient of this strange planet that he had eaten. The taste, as well as the quick ocular analysis he made, indicated that it was deficient in many of the chemicals that he needed for his own nutrition, but at least it had energy value, and he imbibed it slowly and thoughtfully. When he had finished, they asked him if he wanted more, but he said politely, "No, thank."

The young woman who had offered it to him said, "Oh, you're a refugee, I suppose. Driven out of your native country?"

He nodded.

"Don't you have any friends here?"

He shook his head, and said, "No, thank."

"That's too bad. You look as if you hadn't eaten for a long time. Your face is awfully thin."

"Yes, thin." He did not explain that for a member of his race he was not thin at all.

“What’s your name, please?”

“Name? What?”

“How do people call you?”

“Kayin. My name Kayin.”

“Kane. That’s rather a strange name for a foreigner. Well, don’t worry, Mr. Kane, we’ll take care of you.”

Her attitude helped erase the hostile encounter of an hour before. When they finally showed him a cot, one of a row on which many men were already stretched out, he tried to reconcile the contradictory kinds of behavior he had met, and decided that the psychology of this race would prove more complicated than he had at first believed.

The cot was extremely inconvenient, but somehow he managed to stretch out on it like the others. He slept little, and in the morning, when he awoke, it was with strained muscles and a sense of fatigue, but he was eager to see more of the world on which he found himself, and he left the next day, to continue his wanderings. During the hours that followed, he covered many miles of ground. With ears and mind open, he picked up more and more words, and by evening he was fairly confident in his ability to make himself understood in almost any situation.

He went hungry that day, but in the evening he slept much more comfortably at the foot of an old tree on a vacant lot. Far above he could see the star from which he had come. He stared at it impersonally for a short time, wondering whether he would see his own planet again. Then he fell into a half-sleep, one that rested him, though still leaving his senses partly alert.

He was becoming more accustomed to the rather short day-and-night rhythm of the planet, and he awoke at the first faint signs of daylight before anyone had noticed him.

That day he encountered groups of men congregated about dingy little buildings on a dingy street. He found that they were seeking employment, and knowing that the best way to learn about a strange race was to study the manner in which the people worked, he joined one of the groups. But there was not a single occupation with regard to which he could claim

experience, and he was hired finally to do heavy, but unskilled labor, at eighty cents an hour.

The work was more difficult for him than for the others. He looked like them, but they had muscles which he simply did not possess. He was so clumsy at lifting rocks that another man, with whom he was working, said finally in exasperation, "Didn't you ever lift anything before? Look, pal, do it like this. Bend at the knees, see? That's it, like this—no, you're doing it all wrong!"

It was a nuisance, it might even be dangerous, to be stared at so closely. The fact was that his knees simply would not bend as human knees did. They were jointed in quite another fashion, and no surface similarities could conceal the fact that in action there was all the difference of two worlds between them.

He said, "Sorry. I—injured."

"Oh, can't bend them, huh? This is no job for you, pal."

"Am stranger. Know not—what else."

"Yeah, it's tough."

He returned to his work again, this time warmed by the other's sympathy, and less uneasy about being observed. And as he worked, he thought sardonically of what they would think on his home planet if they knew.

He was sure that his enemies would have roared with laughter. Here was Kayin, the one they had feared for his brilliant mind, for his knowledge of science, for his practical skill. They had outwitted him—with the odds on their side, it was true—driven him a hunted creature past strange stars, and forced him to come to ground again in the guise of one of the meanest of a mean and unintelligent race. And even in the humble position to which he had been reduced, he could not hold up his end of the work.

He clenched his jaws grimly at the thought, and the very motion made him realize that in no way was he like the others, that even so simple a matter as the number and shape of his teeth might give him away. Unintelligent as

they were, once they took the trouble to look with some care, they would know a creature who was not one of them.

On the second day of work he did arouse suspicion, but at first not from the other workers. The creature that bared its teeth and barked at him was a dog. For a time Kayin found the animal's attention embarrassing. He threw a stone at the beast, but it ran only a short distance, and stopped to bark again. He had an idea of what the trouble was. That day he had replaced his worn trousers by a new and baggy pair of overalls, not yet saturated with the scent of human beings, and the dog had noticed his own faint but strange odor. Now it was making a nuisance of itself, and drawing everyone's attention to him.

"That mutt don't like you, Mac," said a foreman who passed by.

"Funny about dogs, the way they bark at some people," someone laughed.

Kayin threw another stone, but the beast dodged and continued to bark. His audience was growing now, and Kayin's skin began to twitch nervously, in a way that itself might have drawn an audience if they had been in a mood to notice such details of behavior. "I patted cat this morning," he said apologetically. "Crazy dog smells cat."

He would have them all staring at him if this went on much longer, and he knew that he had to act quickly. Looking around him, he spied a compressed air hose lying on the ground. He picked it up, turned on the air, and directed the nozzle at the dog. The blast knocked the animal head over heels, and sent him howling on his way. Everyone laughed, and Kayin turned back to his work in relief. But from now on he knew that he must wear no new clothes.

As the work progressed, his attention turned from the immediate tasks at hand, and he began to wonder what its purpose was. There seemed to be hundreds of men, all engaged in menial tasks, all part of some greater overall plan. He began to wonder, too, if people who could make such plans could be so unintelligent as he had first assumed. Or was it simply that their intelligence had not developed, that they lacked the background of science to make the most of their minds, to use the resources their planet possessed?

A rough voice, almost the twin of that first rough voice of two days before, growled, "Hey, you, wake up and get movin'. Whaddya think you're gettin' "

paid for?”

He swung his pick without looking up. The foreman had no idea that the tall foreigner he knew as Kane was staring at him curiously with tiny camouflaged eyes that quite literally grew in the back of the strangely shaped head, trying to understand what made the human being tick.

By the end of a week Kayin was confident that he knew the language well enough to start reading it. He went to a public school which he found was open in the evenings, and there joined a class where someone explained the alphabet, and made clear to foreigners that English was a language full of traps and pitfalls. Kayin absorbed the information eagerly, but after the third lesson he found the pace much too slow, and did not return. He had never before encountered a language of so strange a structure, and the actual making of the sounds gave him trouble, but the basic principles of language study were as valid here as on his home planet, and he learned rapidly. By the end of a month he could read.

By the end of the same month he had learned, too, the nature of the project on which he was working. On several occasions, the engineer in charge had passed by him to exchange a few words with the foreman and once with the man who had ordered the building.

The words had been significant. There could be no mistake, for Kayin had come across them in his reading. “Laboratory” had a very definite meaning. And there were such expressions as “incubation tanks,” and “thermostat controls.” All in all, enough to let him know that they were engaged in constructing a plant for the manufacture of biochemical substances.

He knew that there were biochemical plants already in existence, scattered over the civilized part of the planet, and the thought of great danger did not occur to him. But he continued, as the men around him would have put it, to keep his ears open, and as time went on he became more and more disquieted.

Meanwhile, his relations with the people among whom he worked became almost human. They greeted him every day as one of themselves, asked

casual questions about the place from which he had come and the way he had lived, and accepted the answers as if with a quiet confidence that he was telling the truth. Once, in an access of good feeling, one of them had gone so far as to slap him amicably on the shoulder, and Kayin had experienced agony such as he had never felt before. But he managed to conceal the pain, and even to laugh weakly. He made sure, however, that a similar incident would never happen again. Whenever someone approached him too closely, he opened his extra eyes very slightly, ready to step aside at the touch of a too friendly hand.

He had not realized how much his own attitude toward them had changed until the day an accident occurred. A large shelf of rock had unexpectedly turned up to block the excavation of a wide pit, and it had been necessary to shatter it with dynamite. But the explosive did not at first go off, and one of the men had gone back to see what was wrong. He had been just in time to be knocked down by the blast itself, and to be covered by the mass of dirt and broken rock that slid into the excavation.

It was Kayin who ran for him first, digging frantically away at the smothering mass, without regard for the fragments that continued to rain down upon him. And after he had reached the man, who was unconscious, but still breathing, it was Kayin who had wondered why on this Earth he had taken the risk for the sake of a creature who meant so little to him. There was another risk as well, he found, when they summoned a doctor to treat the injured man, and someone suggested that Kayin had been injured too. But Kayin quickly shrugged off the idea that he needed treatment, and went back at once to his work. He wanted no doctor discovering what unusual arms and legs and internal organs he had.

In the days that followed he continued to wonder at himself. Working together with these men, he had changed. But he must be careful, he knew, not to change too far. They had only, he was certain, to see him as he was, to realize his difference from them, and their friendliness would change to hate, causing them to turn from him with fear and loathing.

The building had reached the stage of scaffolding, and he was still at work. It was now that he learned the full truth about the project which was soon to come into operation.

He was on the outside of the building, and two of the men in charge were nearby. One of them, shrewd and elderly, had financed the building. The other, in his thirties, was the scientist who had invented the process. They were speaking in low tones, tones which no human being standing in Kayin's position would have been able to understand.

"You're sure, Blayson, that there's no danger?" the older man was saying.

The scientist smiled. "There's always some danger, Mr. Lymer, especially when you try something new. But there's nothing we shouldn't be able to control."

"I still don't think that you know too much about what you're doing."

"I've admitted that myself. But we get results, don't we? We'll corner the world market, Mr. Lymer. Name your antibiotic and we'll make it. And in addition to anything now being sold, we'll have dozens that nobody has even imagined. I think I've given you enough evidence to convince you of that."

"I suppose you have. But this use of cosmic rays makes me uneasy. You still don't know enough about them."

It was at this point that Kayin's third and fourth eyes, usually so completely concealed, popped wide open in surprise and terror. It was fortunate that no one took the trouble to look at him at that moment.

The younger man was saying confidently, "We'll control them. All we need to know is that they're high energy, higher than anything we can produce here on Earth, and that we can concentrate them in a way no one else can. There's nothing to fear, nothing that ordinary precautions shouldn't enable us to handle."

Nothing, Kayin thought, but the danger of depopulating most of a planet. His mind went back to what had happened on the second planet of his own sun, what had almost happened on the fourth planet. Within the space of a few hundred centads of time, the second planet, with its population of four billion, had lost every inhabitant, and become a sterile monument of a dead civilization. Only the warning of what had already taken place had enabled the second planet to survive.

And in this place too, disaster would strike quickly. Kayin had begun to read more and more, and he knew what was taking place here. Science had developed quickly, but sporadically. Vast regions had remained untouched by it, masses of people knew nothing of it but the name and the fact that it could perform miracles. True, they had learned that certain discoveries might lead to disaster as well as to the improvement of their lives, but they still failed to test their discoveries fully before using them, they still failed to exercise the necessary controls.

The young man, Blayson, had made his discovery ahead of its proper time. At the rate at which human science was progressing, thought Kayin, at least a hundred years would have to pass before such a discovery could be considered safe. At the present stage, it simply could not be controlled. The concentrated cosmic rays would, as Blayson evidently anticipated, cause tremendous mutations in living organisms, in the molds and mycetes of different kinds, it would lead to the manufacture of useful antibiotics. But they would also lead to the production of entirely new forms of sub-microscopic life, forms not susceptible to ordinary methods of sterilization, forms that would multiply with inexorable speed. These forms produced from bits of human tissue would inevitably be deadly to human beings and related species.

He himself, thought Kayin, possessed of a different body chemistry, might escape. But he would be the only intelligent creature to do so. And after the viruses had done their work, the planet, in its desolation and sterility, would resemble the second planet of his own star.

If he had learned of the imminence of disaster at the time he first arrived, he would hardly have been affected. He would have hated to see a race disappear. He had the scientist's desire to keep any race, even the least useful, alive so that he might study it, and at the very worst, write an article about it. But now—and this he realized almost to his amazement—he felt practically human himself. It must be the way he was living and working, the way the others treated him on the job. He did not want to see them annihilated.

He was the only one to know the danger. He realized at once that he could tell no one. Blayson and Lymer had eyes only on the fortunes they intended to make, and they would have refused to believe anything that stood in the way of those fortunes. Nor could he go to anyone else. There would be questions—

He imagined himself trying to inform the Mayor of the city. Some underling would be sure to meet him. “You say there’s danger, Mr. Kayin? That how you pronounce it? Foreign-sounding name. Where’d you come from?”

He would have to invent answers in advance for every possible embarrassing question. And then would come the most embarrassing of all:

“How do you know there’s danger?”

There was no answer to that. Could he say that he had worked in the same field of research himself? Or could he give them the example of what had happened on another planet?

It was a problem that he would have to solve by himself. He racked his head, and found no simple solution. He had his optical analyzer, and one or two additional trifles like it, but there was no special apparatus he could use, no weapons. Outside of his scientific knowledge and his non-human brain, he had only the same weapons as the human beings themselves. And these were hardly enough to put an end for good to a project on which so many human beings had built their hopes.

The buildings approached completion, the laboratory equipment began to be installed. And then, finally, when delay was no longer possible, on the eve of the very day that was to see the plant put into operation, Kayin acted.

He knew that until work actually began there would be but a single night watchman, and it was this man at whom he struck first. A single carefully aimed blow with a padded club produced unconsciousness. Kayin did not strike hard, but he struck hard enough. As the watchman fell, Kayin seized the man, bound and gagged him.

Then he entered the building and began to destroy.

He started with the cosmic ray collector, working quietly and efficiently, and concentrating on the electronic and magnetic parts. These had been

ordered long before the building itself had been begun. They would be hard to replace.

He passed on to the giant incubator vats, and finally turned his attention to the collection of formulas which reposed in the files. These were important, but he knew that they were not enough. The most important formulas of all lay in the mind of the man who had developed the process, and that was, for the moment at least, beyond him. What Kayin was doing now was playing for time.

He was setting a match to the papers of the last file when he heard a voice. More time had passed than he realized, and they had come early on this day that was to have seen the beginning of a great enterprise.

They must already have noted the absence of the watchman. Now he heard a gasp from Lymer, a groan that must have come from Blayson. Then there was cursing, slow, bitter and steady. Then footsteps, and Lymer was standing at the door of the office and shouting, "Here he is!"

Blayson was shouting to someone outside, and Kayin knew that in a moment the entire building would be swarming with people. He promptly tossed one of the files at Lymer, saw the man stumble and fall in an effort to avoid being hit, and was past the door before the enraged man could scramble to his feet again.

Then he was in the great incubation room, with its monstrous vats, heading for the opposite end. But before he could reach it, a door swung open. A policeman appeared, and shouted, "Hey, you—stop!"

He dashed out through a side door into a small control room. He locked the door behind him. He heard a club pound furiously upon it, and the pounding ceased as the policeman decided against a further waste of time here. Kayin ran to the other door. As he did so the knob turned. He threw all his weight against the door and turned the key. Men pounded on both doors, and he looked around for windows. There were none. He was locked in.

He heard Blayson's voice, "Open up! You can't get away!"

There was, it was true, no way out. But Kayin said calmly, "Stay away, or I'll blow up the building."

After the destruction he had already accomplished, they had no way of knowing that he was bluffing. The pounding stopped. Through the door he heard the whispered sounds of consultation. Then Blayson's voice again, "Come out. We won't hurt you."

"I realize that."

"You realize—"

"You think that I am afraid, do you not?"

There was surprise in the tones of Blayson's reply. "You don't sound crazy, but—"

"But what other reason could I have had for destroying so much valuable equipment?"

He heard Lymer say, "Over a hundred thousand dollars' worth. That cosmic ray collector cost at least that."

A policeman's voice: "You saw him, Mr. Lymer. Recognize him?"

"No, never saw him before in my life."

Blayson shouted again, this time with unconcealed anger, "Come on out."

"With pleasure. But first I should like to talk to you."

"You'll talk later."

"No." He knew that later they would not listen to him, and he realized that if he could convince Blayson of the danger of the project, his battle would be won. "Do you want to know why I did so much damage, Mr. Blayson?"

"You've already answered that."

"No, I am not insane. It is you who are failing to use your mind properly. Your method is extremely dangerous."

"How do you know?"

"I have made similar studies."

"That's absurd. No one on Earth has done anything like this."

"*I didn't mention Earth,*" thought Kayin. Aloud, he said patiently, "You are mistaken. Your experiments are not new, and it is known—" he did not say

where it was known—"it is known that they can lead to disaster. They can produce microorganisms of a virulence never before seen here."

"You're just imagining things!"

"I do not imagine. At this period, your discovery is of too treacherous a nature to be used."

Blayson was silent, and Kayin hoped that he was thinking of something else than breaking down the door.

"You will not be the first, Mr. Blayson, to have suppressed a discovery of so great significance."

"I don't believe you. Open the door."

"In a moment. But think of what I have said."

"Open the door."

"Half a moment now. You do not care to listen further?"

A policeman growled, "He's stalling. We'll break it open."

"No need for that," said Kayin. "I shall come out. Perhaps if I speak to you face to face you will believe me."

He removed the jacket and shirt and tie to which he had become so accustomed these past few months. He stretched his muscles freely, and smiled a bitter smile to himself. He said, "The door opens outward. Please give room."

He turned the key in the lock, and slammed the door open. Then he leaped forward.

He could hear the shouts of horror, he could see them standing there petrified. It was a reaction that he had counted on. A policeman fired his revolver, but so excitedly that every bullet missed, while he yelled, "It's not human. It's not human!"

The gravity was a little too great here for him to do any real flying, but at least his wings, unfolded at last, could take him high into the air in the great room, terrifying and confusing them. As he slowly floated down, he could see them racing around madly. He headed for the door to an outer room. A policeman who was standing in his path could not move his bulk out of the

way in time. Kayin crashed into him and sent him sprawling. Then, from behind him, another policeman aimed a blow with the butt of his gun. With his extra eyes Kayin saw what was happening, and a blow of his great wings knocked the policeman down.

Then he was running down the corridor, using his wings to give him a little extra speed. The door through which he had just come swung open again, and a bullet sang past him, tearing into the non-fleshy part of his wing. He hardly felt it.

He was outside.

The noise of the shooting had spread the alarm. Another policeman came running, took one look at him, closed his eyes, and swayed there. Kayin seized the man's own club and hit him over the head with it. He dragged the unconscious body into a deep, clean, concrete-lined pit that had been reserved for some of the dangerously radioactive byproduct that he was now sure they would never make. In the dark of the pit, he stripped the policeman of the uniform. The man was broad across the shoulders, and the uniform fitted nicely across Kayin's wings.

Now he leaped out of the pit, adding his yells to those of the others. A car, the one in which Blayson and Lymer had arrived, was standing parked at the edge of the yard, and he slipped into it. He was out of the yard before they realized what was happening.

But a policeman's uniform, he knew, was too conspicuous. A mile away, he stopped a puzzled truck driver, threatened the man with his revolver, and drove away a moment later with an extra, less conspicuous suit of clothes. He turned on the radio and learned, as he had suspected, that an alarm for him had already been broadcast.

He left the car on a deserted side road, and changed into his truck driver's outfit. He knew enough now about human customs to feel momentarily safe. And he knew enough also to realize that they would institute a nationwide search for a strange creature with wings. He would not be safe for long. He had to get back to his ship, of which, fortunately, they knew nothing. They might suspect, but they could have no idea of where he had hidden it.

That night, still dressed as a truck driver, he broke into a factory that made electrical appliances. When he left, he had with him most of what he needed for repairs.

It was two days later that he reached his ship with a supply of food. He hoped that he had been unobserved, but he could not be sure. He set to

work, using the Earth-made supplies to patch up, in makeshift fashion, the damage caused by the crash.

Another two days and the ship would operate. He was short on fuel, but if he looked for it, he knew he could find enough to send him on his way and leave this planet for good.

He realized now that he didn't want to leave. In the days he had spent here, he had gradually lost some of his feeling of loneliness. Almost despite themselves, these human beings had made him feel like one of them. Their planet would never take the place of the one he had left, but in many ways it had become a second home to him.

He had made it uninhabitable for himself. If he had said nothing, done nothing, then no one would have suspected, and he would have been allowed to stay—until disaster struck them all.

At least he had delayed that. The radio that night brought him the news that Blayson, who had been slightly injured in the struggle, had been taken to a hospital, his mind temporarily gone under the shock of what had happened. He would be unable, for the time, to reconstruct what Kayin had destroyed. Lymer, disheartened by the loss, had announced that he had no plans for rebuilding the factory. Despite their stupidity, Kayin had won them a respite.

He had won nothing for himself. The following day he heard warning sounds, and saw groups of men closing in around the ship. He was pleased to see that, despite all difficulties, they had traced the path he had taken. They were not so stupid after all.

He went into his ship, and the door slid shut. Night was falling, and in the darkness the ship leaped upward at a sharp angle. Now there would be hundreds of people who saw the shooting star, but this time a star that shot upward.

He rose to a height of twenty miles, and remained at that level, cruising slowly. Far above, he could see through the viewplates the star—Vega, they called it here—which was his native sun. Already an exile from his homeland, he was now being exiled from his second home.

Suddenly he knew that being exiled once was enough. He was tired of fleeing through space, tired of making friends and then being forced to

leave them. He had made a home here, and here he would stand and fight.

Below him, the surface of the planet was now rocky and deserted. The ship began to sink. It was still dark, and the vessel came to rest slowly and inconspicuously upon a craggy peak where there was little danger that any human being would stumble upon it. Far below he could see the outline of a town, picked out of the darkness by light reflected from clouds above. Looking through a distance viewer he could even distinguish the individual lights, and he was able to read a sign that flaunted its message boldly alongside a bridge: WELCOME TO HARDENDALE.

He smiled, and said softly, in the language that was no longer strange to him, "I accept the invitation."

Stretching his wings, he parachuted down through the darkness to level ground, prepared to become once more a member by adoption of the human race. And this time, as he walked cautious and alone through the night, he no longer felt lonely.

*** END OF THE PROJECT GUTENBERG EBOOK TASK OF KAYIN

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg™ electronic works to protect the PROJECT GUTENBERG™ concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for an eBook, except by following the terms of the trademark license, including paying royalties for use of the Project Gutenberg trademark. If you do not charge anything for copies of this eBook, complying with the trademark license is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. Project Gutenberg eBooks may be modified and printed and given away—you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE

THE FULL PROJECT GUTENBERG™ LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg electronic works

1.A. By reading or using any part of this Project Gutenberg electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the collection of Project Gutenberg electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are

located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg mission of promoting free access to electronic works by freely sharing Project Gutenberg works in compliance with the terms of this agreement for keeping the Project Gutenberg name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg License must appear prominently whenever any copy of a Project Gutenberg work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg™ License included with this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg work in a format other than “Plain Vanilla ASCII” or other format used in the official version posted on the official Project Gutenberg website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project

Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to

you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg work, (b) alteration, modification, or additions or deletions to any Project Gutenberg work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg

Project Gutenberg is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the

efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg's goals and ensuring that the Project Gutenberg collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 41 Watchung Plaza #516, Montclair NJ 07042, USA, +1 (862) 621-9288. Email contact links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment

including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate.

Section 5. General Information About Project Gutenberg electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg eBooks with only a loose network of volunteer support.

Project Gutenberg eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a

copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility:
www.gutenberg.org.

This website includes information about Project Gutenberg, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
