**Of course coming events cast their shadows
before, but this shadow was 400 years long!**

The following advertisement appeared in the July 1953 issue of several magazines:

MASTERY OF ALL KNOWLEDGE CAN BE YOURS!

**What is the secret source of those profound
principles that can solve the problems of life?
Send for our FREE booklet of explanation.**

**Do not be a leaf in the wind! YOU
can alter the course of your life!**

Tap the treasury of Wisdom through the ages!

The Perpetual Order of Seekers After Truth

POSAT

an ancient secret society

Most readers passed it by with scarcely a glance. It was, after all, similar to the many that had appeared through the years under the name of that same society. Other readers, as their eyes slid over the familiar format of the ad, speculated idly about the persistent and mildly mysterious organization behind it. A few even resolved to clip the attached coupon and send for the booklet—sometime—when a pen or pencil was nearer at hand.

Bill Evans, an unemployed pharmacist, saw the ad in a copy of *Your Life and Psychology* that had been abandoned on his seat in the bus. He filled out the blanks on the coupon with a scrap of stubby pencil. "You can alter

the course of your life!" he read again. He particularly liked that thought, even though he had long since ceased to believe it. He actually took the trouble to mail the coupon. After all, he had, literally, nothing to lose, and nothing else to occupy his time.

Miss Elizabeth Arnable was one of the few to whom the advertisement was unfamiliar. As a matter of fact, she very seldom read a magazine. The radio in her room took the place of reading matter, and she always liked to think that it amused her cats as well as herself. Reading would be so selfish under the circumstances, wouldn't it? Not but what the cats weren't almost smart enough to read, she always said.

It just so happened, however, that she had bought a copy of the *Antivivisectionist Gazette* the day before. She pounced upon the POSAT ad as a trout might snap at a particularly attractive fly. Having filled out the coupon with violet ink, she invented an errand that would take her past the neighborhood post office so that she could post it as soon as possible.

Donald Alford, research physicist, came across the POSAT ad tucked at the bottom of a column in *The Bulletin of Physical Research*. He was engrossed in the latest paper by Dr. Crandon, a man whom he admired from the point of view of both a former student and a fellow research worker. Consequently, he was one of the many who passed over the POSAT ad with the disregard accorded to any common object.

He read with interest to the end of the article before he realized that some component of the advertisement had been noted by a region of his brain just beyond consciousness. It teased at him like a tickle that couldn't be scratched until he turned back to the page.

It was the symbol or emblem of POSAT, he realized, that had caught his attention. The perpendicularly crossed ellipses centered with a small black circle might almost be a conventionalized version of the Bohr atom of helium. He smiled with mild skepticism as he read through the printed matter that accompanied it.

"I wonder what their racket is," he mused. Then, because his typewriter was conveniently at hand, he carefully tore out the coupon and inserted it in the machine. The spacing of the typewriter didn't fit the dotted lines on the coupon, of course, but he didn't bother to correct it. He addressed an

envelope, laid it with other mail to be posted, and promptly forgot all about it. Since he was a methodical man, it was entrusted to the U.S. mail early the next morning, together with his other letters.

Three identical forms accompanied the booklet which POSAT sent in response to the three inquiries. The booklet gave no more information than had the original advertisement, but with considerable more volubility. It promised the recipient the secrets of the Cosmos and the key that would unlock the hidden knowledge within himself—if he would merely fill out the enclosed form.

Bill Evans, the unemployed pharmacist, let the paper lie unanswered for several days. To be quite honest, he was disappointed. Although he had mentally disclaimed all belief in anything that POSAT might offer, he had watched the return mails with anticipation. His own resources were almost at an end, and he had reached the point where intervention by something supernatural, or at least superhuman, seemed the only hope.

He had hoped, unreasonably, that POSAT had an answer. But time lay heavily upon him, and he used it one evening to write the requested information—about his employment (ha!), his religious beliefs, his reason for inquiring about POSAT, his financial situation. Without quite knowing that he did so, he communicated in his terse answers some of his desperation and sense of futility.

Miss Arnable was delighted with the opportunity for autobiographical composition. It required five extra sheets of paper to convey all the information that she wished to give—all about her poor, dear father who had been a missionary to China, and the kinship that she felt toward the mystic cults of the East, her belief that her cats were reincarnations of her loved ones (which, she stated, derived from a religion of the Persians; or was it the Egyptians?) and in her complete and absolute acceptance of everything that POSAT had stated in their booklet. And what would the dues be? She wished to join immediately. Fortunately, dear father had left her in a comfortable financial situation.

To Donald Alford, the booklet seemed to confirm his suspicion that POSAT was a racket of some sort. Why else would they be interested in his employment or financial position? It also served to increase his curiosity.

"What do you suppose they're driving at?" he asked his wife Betty, handing her the booklet and questionnaire.

"I don't really know what to say," she answered, squinting a little as she usually did when puzzled. "I know one thing, though, and that's that you won't stop until you find out!"

"The scientific attitude," he acknowledged with a grin.

"Why don't you fill out this questionnaire incognito, though?" she suggested. "Pretend that we're wealthy and see if they try to get our money. Do they have anything yet except your name and address?"

Don was shocked. "If I send this back to them, it will have to be with correct answers!"

"The scientific attitude again," Betty sighed. "Don't you ever let your imagination run away with the facts a bit? What are you going to give for your reasons for asking about POSAT?"

"Curiosity," he replied, and, pulling his fountain pen from his vest pocket, he wrote exactly that, in small, neat script.

It was unfortunate for his curiosity that Don could not see the contents of the three envelopes that were mailed from the offices of POSAT the following week. For this time they differed.

Bill Evans was once again disappointed. The pamphlet that was enclosed gave what apparently meant to be final answers to life's problems. They were couched in vaguely metaphysical terms and offered absolutely no help to him.

His disappointment was tempered, however, by the knowledge that he had unexpectedly found a job. Or, rather, it had fallen into his lap. When he had thought that every avenue of employment had been tried, a position had been offered him in a wholesale pharmacy in the older industrial part of the city. It was not a particularly attractive place to work, located as it was next to a large warehouse, but to him it was hope for the future.

It amused him to discover that the offices of POSAT were located on the other side of the same warehouse, at the end of a blind alley. Blind alley indeed! He felt vaguely ashamed for having placed any confidence in them.

Miss Arnable was thrilled to discover that her envelope contained not only several pamphlets, (she scanned the titles rapidly and found that one of them concerned the sacred cats of ancient Egypt), but that it contained also a small pin with the symbol of POSAT wrought in gold and black enamel. The covering letter said that she had been accepted as an active member of POSAT and that the dues were five dollars per month; please remit by return mail. She wrote a check immediately, and settled contentedly into a chair to peruse the article on sacred cats.

After a while she began to read aloud so that her own cats could enjoy it, too.

Don Alford would not have been surprised if his envelope had shown contents similar to the ones that the others received. The folded sheets of paper that he pulled forth, however, made him stiffen with sharp surprise.

"Come here a minute, Betty," he called, spreading them out carefully on the dining room table. "What do you make of these?"

She came, dish cloth in hand, and thoughtfully examined them, one by one. "Multiple choice questions! It looks like a psychological test of some sort."

"This isn't the kind of thing I expected them to send me," worried Don. "Look at the type of thing they ask. 'If you had discovered a new and virulent poison that could be compounded from common household ingredients, would you (1) publish the information in a daily newspaper, (2) manufacture it secretly and sell it as rodent exterminator, (3) give the information to the armed forces for use as a secret weapon, or (4) withhold the information entirely as too dangerous to be passed on?'"

"Could they be a spy ring?" asked Betty. "Subversive agents? Anxious to find out your scientific secrets like that classified stuff that you're so careful of when you bring it home from the lab?"

Don scanned the papers quickly. "There's nothing here that looks like an attempt to get information. Besides, I've told them nothing about my work except that I do research in physics. They don't even know what company I work for. If this is a psychological test, it measures attitudes, nothing else. Why should they want to know my attitudes?"

"Do you suppose that POSAT is really what it claims to be—a secret society—and that they actually screen their applicants?"

He smiled wryly. "Wouldn't it be interesting if I didn't make the grade after starting out to expose their racket?"

He pulled out his pen and sat down to the task of resolving the dilemmas before him.

His next communication from POSAT came to his business address and, paradoxically, was more personal than its forerunners.

Dear Doctor Alford:

We have examined with interest the information that you have sent to us. We are happy to inform you that, thus far, you have satisfied the requirements for membership in the Perpetual Order of Seekers After Truth. Before accepting new members into this ancient and honorable secret society, we find it desirable that they have a personal interview with the Grand Chairman of POSAT.

Accordingly, you are cordially invited to an audience with our Grand Chairman on Tuesday, July 10, at 2:30 P.M. Please let us know if this arrangement is acceptable to you. If not, we will attempt to make another appointment for you.

The time specified for the appointment was hardly a convenient one for Don. At 2:30 P.M. on most Tuesdays, he would be at work in the laboratory. And while his employers made no complaint if he took his research problems home with him and worried over them half the night, they were not equally enthusiastic when he used working hours for pursuing unrelated

interests. Moreover, the headquarters of POSAT was in a town almost a hundred miles distant. Could he afford to take a whole day off for chasing will-o-wisps?

It hardly seemed worth the trouble. He wondered if Betty would be disappointed if he dropped the whole matter. Since the letter had been sent to the laboratory instead of his home, he couldn't consult her about it without telephoning.

Since the letter had been sent to the laboratory instead of his home! But it was impossible!

He searched feverishly through his pile of daily mail for the envelope in which the letter had come. The address stared up at him, unmistakably and fearfully legible. The name of his company. The number of the room he worked in. In short, the address that he had never given them!

"Get hold of yourself," he commanded his frightened mind. "There's some perfectly logical, easy explanation for this. They looked it up in the directory of the Institute of Physics. Or in the alumni directory of the university. Or—or—"

But the more he thought about it, the more sinister it seemed. His laboratory address was available, but why should POSAT take the trouble of looking it up? Some prudent impulse had led him to withhold that particular bit of information, yet now, for some reason of their own, POSAT had unearthed the information.

His wife's words echoed in his mind, "Could they be a spy ring? Subversive agents?"

Don shook his head as though to clear away the confusion. His conservative habit of thought made him reject that explanation as too melodramatic.

At least one decision was easier to reach because of his doubts. Now he knew he had to keep his appointment with the Grand Chairman of POSAT.

He scribbled a memo to the department office stating that he would not be at work on Tuesday.

At first Don Alford had some trouble locating the POSAT headquarters. It seemed to him that the block in which the street number would fall was occupied entirely by a huge sprawling warehouse, of concrete construction, and almost entirely windowless. It was recessed from the street in several places to make room for the small, shabby buildings of a wholesale pharmacy, a printer's plant, an upholstering shop, and was also indented by alleys lined with loading platforms.

It was at the back of one of the alleys that he finally found a door marked with the now familiar emblem of POSAT.

He opened the frosted glass door with a feeling of misgiving, and faced a dark flight of stairs leading to the upper floor. Somewhere above him a buzzer sounded, evidently indicating his arrival. He picked his way up through the murky stairwell.

The reception room was hardly a cheerful place, with its battered desk facing the view of the empty alley, and a film of dust obscuring the pattern of the gray-looking wallpaper and worn rug. But the light of the summer afternoon filtering through the window scattered the gloom somewhat, enough to help Don doubt that he would find the menace here that he had come to expect.

The girl addressing envelopes at the desk looked very ordinary. *Not the Mata-Hari type*, thought Don, with an inward chuckle at his own suspicions. He handed her the letter.

She smiled. "We've been expecting you, Dr. Alford. If you'll just step into the next room—"

She opened a door opposite the stairwell, and Don stepped through it.

The sight of the luxurious room before him struck his eyes with the shock of a dentist's drill, so great was the contrast between it and the shabby reception room. For a moment Don had difficulty breathing. The rug—Don had seen one like it before, but it had been in a museum. The paintings on the walls, ornately framed in gilt carving, were surely old masters—of the Renaissance period, he guessed. Although he recognized none of the pictures, he felt that he could almost name the artists. That glowing one near the corner would probably be a Titian. Or was it Tintoretto? He

regretted for a moment the lost opportunities of his college days, when he had passed up Art History in favor of Operational Circuit Analysis.

The girl opened a filing cabinet, the front of which was set flush with the wall, and, selecting a folder from it, disappeared through another door.

Don sprang to examine the picture near the corner. It was hung at eye level—that is, at the eye level of the average person. Don had to bend over a bit to see it properly. He searched for a signature. Apparently there was none. But did artists sign their pictures back in those days? He wished he knew more about such things.

Each of the paintings was individually lighted by a fluorescent tube held on brackets directly above it. As Don straightened up from his scrutiny of the picture, he inadvertently hit his head against the light. The tube, dislodged from its brackets, fell to the rug with a muffled thud.

Now I've done it! thought Don with dismay. But at least the tube hadn't shattered.

In fact—it was still glowing brightly! His eyes registered the fact, even while his mind refused to believe it. He raised his eyes to the brackets. They were simple pieces of solid hardware designed to support the tube.

There were no wires!

Don picked up the slender, glowing cylinder and held it between trembling fingers. Although it was delivering as much light as a two or three hundred watt bulb, it was cool to the touch. He examined it minutely. There was no possibility of concealed batteries.

The thumping of his heart was caused not by the fact that he had never seen a similar tube before, but because he had. He had never held one in his hands, though. The ones which his company had produced as experimental models had been unsuccessful at converting all of the radioactivity into light, and had, of necessity, been heavily shielded.

Right now, two of his colleagues back in the laboratory would still be searching for the right combination of fluorescent material and radioactive salts with which to make the simple, efficient, self-contained lighting unit that he was holding in his hand at this moment!

But this is impossible! he thought. *We're the only company that's working on this, and it's secret. There can't be any in actual production!*

And even if one had actually been successfully produced, how would it have fallen into the possession of POSAT, an Ancient Secret Society, The Perpetual Order of Seekers After Truth?

The conviction grew in Don's mind that here was something much deeper and more sinister than he would be able to cope with. He should have asked for help, should have stated his suspicions to the police or the F.B.I. Even now—

With sudden decision, he thrust the lighting tube into his pocket and stepped swiftly to the outer door. He grasped the knob and shook it impatiently when it stuck and refused to turn. He yanked at it. His impatience changed to panic. It was locked!

A soft sound behind him made him whirl about. The secretary had entered again through the inner door. She glanced at the vacant light bracket, then significantly at his bulging pocket. Her gaze was still as bland and innocent as when he had entered, but to Don she no longer seemed ordinary. Her very calmness in the face of his odd actions was distressingly ominous.

"Our Grand Chairman will see you now," she said in a quiet voice.

Don realized that he was half crouched in the position of an animal expecting attack. He straightened up with what dignity he could manage to find.

She opened the inner door again and Don followed her into what he supposed to be the office of the Grand Chairman of POSAT.

Instead he found himself on a balcony along the side of a vast room, which must have been the interior of the warehouse that he had noted outside. The girl motioned him toward the far end of the balcony, where a frosted glass door marked the office of the Grand Chairman.

But Don could not will his legs to move. His heart beat at the sight of the room below him. It was a laboratory, but a laboratory the like of which he had never seen before. Most of the equipment was unfamiliar to him. Whatever he did recognize was of a different design than he had ever used, and there was something about it that convinced him that this was more advanced. The men who bent busily over their instruments did not raise their eyes to the figures on the balcony.

"Good Lord!" Don gasped. "That's an atomic reactor down there!" There could be no doubt about it, even though he could see it only obscurely through the bluish-green plastic shielding it.

His thoughts were so clamorous that he hardly realized that he had spoken aloud, or that the door at the end of the balcony had opened.

He was only dimly aware of the approaching footsteps as he speculated wildly on the nature of the shielding material. What could be so dense that only an inch would provide adequate shielding and yet remain semitransparent?

His scientist's mind applauded the genius who had developed it, even as the alarming conviction grew that he wouldn't—couldn't—be allowed to leave here any more. Surely no man would be allowed to leave this place alive to tell the fantastic story to the world!

"Hello, Don," said a quiet voice beside him. "It's good to see you again."

"Dr. Crandon!" he heard his own voice reply. "*You're* the Grand Chairman of POSAT?"

He felt betrayed and sick at heart. The very voice with which Crandon had spoken conjured up visions of quiet lecture halls and his own youthful excitement at the masterful and orderly disclosure of scientific facts. To find him here in this mad and treacherous place—didn't anything make sense any longer?

"I think we have rather abused you, Don," Dr. Crandon continued. His voice sounded so gentle that Don found it hard to think there was any evil in it. "I can see that you are suspicious of us, and—yes—afraid."

Don stared at the scene below him. After his initial glance to confirm his identification of Crandon, Don could not bear to look at him.

Crandon's voice suddenly hardened, became abrupt. "You're partly right about us, of course. I hate to think how many laws this organization has broken. Don't condemn us yet, though. You'll be a member yourself before the day is over."

Don was shocked by such confidence in his corruptibility.

"What do you use?" he asked bitterly. "Drugs? Hypnosis?"

Crandon sighed. "I forgot how little you know, Don. I have a long story to tell you. You'll find it hard to believe at first. But try to trust me. Try to believe me, as you once did. When I say that much of what POSAT does is illegal, I do not mean immoral. We're probably the most moral organization in the world. Get over the idea that you have stumbled into a den of thieves."

Crandon paused as though searching for words with which to continue.

"Did you notice the paintings in the waiting room as you entered?"

Don nodded, too bewildered to speak.

"They were donated by the founder of our Organization. They were part of his personal collection—which, incidentally, he bought from the artists themselves. He also designed the atomic reactor we use for power here in the laboratory."

"Then the pictures are modern," said Don, aware that his mouth was hanging open foolishly. "I thought one was a Titian—"

"It is," said Crandon. "We have several original Titians, although I really don't know too much about them."

"But how could a man alive *today* buy paintings from an artist of the Renaissance?"

"He is not alive today. POSAT is actually what our advertisements claim—an *ancient* secret society. Our founder has been dead for over four centuries."

"But you said that he designed your atomic reactor."

"Yes. This particular one has been in use for only twenty years, however."

Don's confusion was complete. Crandon looked at him kindly. "Let's start at the beginning," he said, and Don was back again in the classroom with the deep voice of Professor Crandon unfolding the pages of knowledge in clear and logical manner. "Four hundred years ago, in the time of the Italian Renaissance, a man lived who was a super-genius. His was the kind of incredible mentality that appears not in every generation, or even every century, but once in thousands of years."

"Probably the man who invented what we call the phonetic alphabet was one like him. That man lived seven thousand years ago in Mesopotamia, and his discovery was so original, so far from the natural course of man's thinking, that not once in the intervening seven thousand years has that device been rediscovered. It still exists only in the civilizations to which it has been passed on directly.

"The super-genius who was our founder was not a semanticist. He was a physical scientist and mathematician. Starting with the meager heritage that existed in these fields in his time, he began tackling physical puzzles one by one. Sitting in his study, using as his principal tool his own great mind, he invented calculus, developed the quantum theory of light, moved on to electromagnetic radiation and what we call Maxwell's equations—although, of course, he antedated Maxwell by centuries—developed the special and general theories of relativity, the tool of wave mechanics, and finally, toward the end of his life, he mathematically derived the packing fraction that describes the binding energy of nuclei—"

"But it can't be done," Don objected. "It's an observed phenomenon. It hasn't been derived." Every conservative instinct that he possessed cried out against this impossible fantasy. And yet—there sat the reactor, sheathed in its strange shield. Crandon watched the direction of Don's glance.

"Yes, the reactor," said Crandon. "He built one like it. It confirmed his theories. His calculations showed him something else too. He saw the destructive potentialities of an atomic explosion. He himself could not have built an atomic bomb; he didn't have the facilities. But his knowledge would have enabled other men to do so. He looked about him. He saw a political setup of warring principalities, rival states, intrigue, and squabbles over political power. Giving the men of his time atomic energy would have been like handing a baby a firecracker with a lighted fuse.

"What should he have done? Let his secrets die with him? He didn't think so. No one else in his age could have *derived* the knowledge that he did. But it was an age of brilliant men. Leonardo. Michelangelo. There were men capable of *learning* his science, even as men can learn it today. He gathered some of them together and founded this society. It served two purposes. It perpetuated his discoveries and at the same time it maintained the greatest secrecy about them. He urged that the secrets be kept until the

time when men could use them safely. The other purpose was to make that time come about as soon as possible."

Crandon looked at Don's unbelieving face. "How can I make you see that it is the truth? Think of the eons that man or manlike creatures have walked the Earth. Think what a small fraction of that time is four hundred years. Is it so strange that atomic energy was discovered a little early, by this displacement in time that is so tiny after all?"

"But by one man," Don argued.

Crandon shrugged. "Compared with him, Don, you and I are stupid men. So are the scientists who slowly plodded down the same road he had come, stumbling first on one truth and then the succeeding one. We know that inventions and discoveries do not occur at random. Each is based on the one that preceded it. We are all aware of the phenomenon of simultaneous invention. The path to truth is a straight one. It is only our own stupidity that makes it seem slow and tortuous.

"He merely followed the straight path," Crandon finished simply.

Don's incredulity thawed a little. It was not entirely beyond the realm of possibility.

But if it were true! A vast panorama of possible achievements spread before him.

"Four hundred years!" he murmured with awe. "You've had four hundred years head-start on the rest of the world! What wonders you must have uncovered in that time!"

"Our technical achievements may disappoint you," warned Crandon. "Oh, they're way beyond anything that you are familiar with. You've undoubtedly noticed the shielding material on the reactor. That's a fairly recent development of our metallurgical department. There are other things in the laboratory that I can't even explain to you until you have caught up on the technical basis for understanding them.

"Our emphasis has not been on physical sciences, however, except as they contribute to our central project. We want to change civilization so that it can use physical science without disaster."

For a moment Don had been fired with enthusiasm. But at these words his heart sank.

"Then you've failed," he said bitterly. "In spite of centuries of advance warning, you've failed to change the rest of us enough to prevent us from trying to blow ourselves off the Earth. Here we are, still snarling and snapping at our neighbors' throats—and we've caught up with you. We have the atomic bomb. What's POSAT been doing all that time? Or have you found that human nature really can't be changed?"

"Come with me," said Crandon.

He led the way along the narrow balcony to another door, then down a steep flight of stairs. He opened a door at the bottom, and Don saw what must have been the world's largest computing machine.

"This is our answer," said Crandon. "Oh, rather, it's the tool by which we find our answer. For two centuries we have been working on the newest of the sciences—that of human motivation. Soon we will be ready to put some of our new knowledge to work. But you are right in one respect, we are working now against time. We must hurry if we are to save our civilization. That's why you are here. We have work for you to do. Will you join us, Don?"

"But why the hocus-pocus?" asked Don. "Why do you hide behind such a weird front as POSAT? Why do you advertise in magazines and invite just anyone to join? Why didn't you approach me directly, if you have work for me to do? And if you really have the answers to our problems, why haven't you gathered together all the scientists in the world to work on this project—before it's too late?"

Crandon took a sighing breath. "How I wish that we could do just that! But you forget that one of the prime purposes of our organization is to maintain the secrecy of our discoveries until they can be safely disclosed. We must be absolutely certain that anyone who enters this building will have joined POSAT before he leaves. What if we approached the wrong scientist?

Centuries of accomplishment might be wasted if they attempted either to reveal it or to exploit it!

"Do you recall the questionnaires that you answered before you were invited here? We fed the answers to this machine and, as a result, we know more about how you will react in any given situation than you do yourself. Even if you should fail to join us, our secrets would be safe with you. Of course, we miss a few of the scientists who might be perfect material for our organization. You'd be surprised, though, at how clever our advertisements are at attracting exactly the men we want. With the help of our new science, we have baited our ads well, and we know how to maintain interest. Curiosity is, to the men we want, a powerful motivator."

"But what about the others?" asked Don. "There must be hundreds of applicants who would be of no use to you at all."

"Oh, yes," replied Crandon. "There are the mild religious fanatics. We enroll them as members and keep them interested by sending pamphlets in line with their interests. We even let them contribute to our upkeep, if they seem to want to. They never get beyond the reception room if they come to call on us. But they are additional people through whom we can act when the time finally comes.

"There are also the desperate people who try POSAT as a last resort—lost ones who can't find their direction in life. For them we put into practice some of our newly won knowledge. We rehabilitate them—anonymously, of course. Even find jobs or patch up homes. It's good practice for us.

"I think I've answered most of your questions, Don. But you haven't answered mine. Will you join us?"

Don looked solemnly at the orderly array of the computer before him. He had one more question.

"Will it really work? Can it actually tell you how to motivate the stubborn, quarrelsome, opinionated people one finds on this Earth?"

Crandon smiled. "You're here, aren't you?"

Don nodded, his tense features relaxing.

"Enroll me as a member," he said.

By reading or using any part of this Project Gutenberg electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the collection of Project Gutenberg electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are

located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg mission of promoting free access to electronic works by freely sharing Project Gutenberg works in compliance with the terms of this agreement for keeping the Project Gutenberg name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg License must appear prominently whenever any copy of a Project Gutenberg work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg™ License included with this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg work in a format other than “Plain Vanilla ASCII” or other format used in the official version posted on the official Project Gutenberg website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project

Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to

you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg work, (b) alteration, modification, or additions or deletions to any Project Gutenberg work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg

Project Gutenberg is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the

efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg's goals and ensuring that the Project Gutenberg collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 41 Watchung Plaza #516, Montclair NJ 07042, USA, +1 (862) 621-9288. Email contact links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment

including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate.

Section 5. General Information About Project Gutenberg electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg eBooks with only a loose network of volunteer support.

Project Gutenberg eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a

copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility:
www.gutenberg.org.

This website includes information about Project Gutenberg, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
