A MARVEL OF ARTISTIC GENIUS.

COGGESHALL in Essex is a small market-town, which in days past was of some slight importance as a busy little manufacturing place, but which of later years has been drained of population, like many another place, to supply material for the great 'centres.' It now has little to boast of but its fine church, one of the three finest in the county, and some most interesting ruins, well known to antiquaries; it takes, however, a great pride in owning the parentage of the subject of this notice.

John Carter was the only son of a respectable labourer in Coggeshall, but was himself brought up to silk-weaving, that being the staple trade of the town. He was educated in the usual way at the national school; but at the age of thirteen was transferred to Sir R. Hitcham's grammar-school, where he continued about two years. During this period he was chiefly remarkable for his aptitude for getting into mischief; and the only sign given of the latent talent which was afterwards so strangely developed in him was in drawing horses and dogs of questionable beauty on his slates and copy-books; the walls of his cottage also were frequently put under requisition for the same purpose; a mark of talent which his mother in those days could have readily dispensed with, as not tending to improve the look of her humble apartment, which she always kept most scrupulously neat and clean. He was a bright intelligent boy, and this and his high spirits made him a general favourite, but proved also a great snare to him. He became acquainted with a set of wild young men, and soon, naturally enough, became the ringleader in all sorts of daring enterprise.

When Carter was about twenty he married; but though his wife was a quiet and respectable young woman, his marriage does not appear to have steadied him. He and his wild companions used to meet at one of the public-houses and there talk over and arrange their operations. One of the projects which these choice spirits agreed upon was a rooking expedition, the young rooks being

then in season. It was in the month of May 1836. The place agreed on was Holfeld Grange, there being there a fine old avenue of elms, in which the rooks from time immemorial had comfortably settled. The avenue was disused; and as it was some little way from the house and away from the road and preserves, there was little chance of their being interrupted by watchmen or gamekeepers. They arranged to meet in a field outside the town with a given signal, by which they might know friend from foe; this was to avoid leaving the town in a body, which might have suggested suspicions of mischief, and induced a little watching. Midnight found them all at the rendezvous, and little more than half an hour's walking brought them to the chosen spot. Carter, foremost as usual, was the first to climb one of the tall trees, and was soon busy enough securing the young birds. The trees in the avenue are very old, and stand somewhat close together, their gnarled and massive boughs frequently interlacing, making it quite possible for an expert climber to pass from one tree to another. In attempting to perform this, Carter deceived either in the distance or strength of a bough, missed his hold and fell to the ground, a distance of about forty feet. He had fallen apparently on his head, for it was crushed forwards on to his chest. For a time he lay perfectly senseless, and the dismay of his wretched companions may be imagined. Their position was an unenviable one, to say the least. What were they to do? A mile and a half from the town, in the dead of night, in the midst of their depredations, which must now inevitably become known, and with one of their party dying or dead, they knew not which.

After a time, Carter seems to have recovered consciousness partially, and made them understand, though his speech was so much affected as to be almost unintelligible, that he wanted them to 'pull him out!' This rough surgery they therefore tried, some taking his head and some his feet, and pulled till he could once more speak plainly; and having done that, seemed to think that there was nothing more they could do.

A MARVEL OF ARTISTIC GENIUS.

COGGESHALL in Essex is a small market-town, which, in days past was of some slight importance as a busy little manufacturing place, but which of later years has been drained of population, like many another place, to supply material for the great 'centres.' It now has little to boast of but its fine church, one of the three finest in the county, and some most interesting ruins, well known to antiquaries; it takes, however, a great pride in owning the parentage of the subject of this notice.

John Carter was the only son of a respectable labourer in Coggeshall, but was himself brought up to silk-weaving, that being the staple trade of the town. He was educated in the usual way at the national school; but at the age of thirteen was transferred to Sir R. Hitcham's grammar-school, where he continued about two years. During this period he was chiefly remarkable for his aptitude for getting into mischief; and the only sign given of the latent talent which was afterwards so strangely developed in him was in drawing horses and dogs of questionable beauty on his slates and copy-books; the walls of his cottage also were frequently put under requisition for the same purpose; a mark of talent which his mother in those days could have readily dispensed with, as not tending to improve the look of her humble apartment, which she always kept most scrupulously neat and clean. He was a bright intelligent boy, and this and his high spirits made him a general favourite, but proved also a great snare to him. He became acquainted with a set of wild young men, and soon, naturally enough, became the ringleader in all sorts of daring enterprise.

When Carter was about twenty he married; but though his wife was a quiet and respectable young woman, his marriage does not appear to have steadied him. He and his wild companions used to meet at one of the public-houses and there talk over and arrange their operations. One of the projects which these choice spirits agreed upon was a rooking expedition, the young rooks being then in season. It was in the month of May 1836. The place agreed on was Holfield Grange, there being there a fine old avenue of elms, in which the rooks from time immemorial had comfortably settled.

The avenue was disused; and as it was some little way from the house and away from the road and preserves, there was little chance of their being interrupted by watchmen or gamekeepers. They arranged to meet in a field outside the town with a given signal, by which they might know friend from foe; this was to avoid leaving the town in a body, which might have suggested suspicions of mischief, and induced a little watching. Midnight found them all at the rendezvous, and little more than half an hour's walking brought them to the chosen spot. Carter, foremost as usual, was the first to climb one of the tall trees, and was soon busy enough securing the young birds. The trees in the avenue are very old, and stand somewhat close together, their gnarled and massive boughs frequently interlacing, making it quite possible for an expert climber to pass from one tree to another. In attempting to perform this, Carter deceived either in the distance or strength of a bough, missed his hold and fell to the ground, a distance of about forty feet. He had fallen apparently on his head, for it was crushed forwards on to his chest. For a time he lay perfectly senseless, and the dismay of his wretched companions may be imagined. Their position was an unenviable one, to say the least. What were they to do? A mile and a half from the town, in the dead of night, in the midst of their depredations, which must now inevitably become known, and with one of their party dying or dead, they knew not which.

After a time, Carter seems to have recovered consciousness partially, and made them understand, though his speech was so much affected as to be almost unintelligible, that he wanted them to 'pull him out!' This rough surgery they therefore tried, some taking his head and some his feet, and pulled till he could once more speak plainly; and having done that, seemed to think that there was nothing more they could do.

Would one or two more judicious tugs have fitted the dislocated bones together again, or would they have broken the spinal marrow? Who can tell? In either case the world would have lost one striking case of latent talent developed by a misfortune which seemed indeed only one remove from death; so we will not complain.

Finding that no further improvement took place in the poor fellow, and that he had lapsed into unconsciousness, his companions procured a hurdle, and laying him on it with all the skill and gentleness of which they were capable, retraced their steps to the town, and bore him to the home which he

had left a few hours before in the full strength and health of early manhood. They laid him on his bed and then slunk away, glad to shut out from their sight the terrible result of their headlong folly, one only remaining to tell to the poor wife the sad story of the disaster. The doctor was sent for; and the result of his examination was the terrible verdict that Carter had not in all probability many days or even hours to live; in any case, whether he lived or not, he was paralysed without hope of recovery.

He did not recover consciousness entirely till the following night; and we who have the full enjoyment of our limbs and health can hardly realise what that poor fellow must have suffered in learning that, even if life were granted to him at all, it was under such terrible conditions as at first to seem to him less a boon than a burden. He would never again be able to move hand or foot, the only power of movement remaining to him being in the neck, which just enabled him to raise or turn round his head; that was *all*—there was not even feeling in the rest of his body. What a dreary blank in the future! What wonder if the undisciplined soul cried out aloud with repining, like a wild bird beating against the bars of a cage; what wonder if in the bitterness of his heart he cried: 'Of what good is my life to me! Better that I had never been born, since all that makes life sweet is taken from me.'

Anguish unknown, terrors too great for words, must that poor soul have met and overcome, ere he had learned the great lesson of sorrow, that life, true life, does not consist in mere physical capabilities and enjoyments, but that there is a far higher, nobler life, the life of the soul and mind, which is as infinitely above the other as heaven is above earth. His mind being now no longer overridden by his superabundant physical nature, began to work and put forth its powers and energies; but it was long ere he found any object on which to expend those powers; not till he had, through several long and heavy years of suffering, learned the great and most difficult lesson of patience—patience, without which he would never have accomplished the wonderful work which we will now proceed to describe.

Having read one day of some young woman who, deprived of the use of her hands, had learned to draw little things with her *mouth*, he was seized with a desire to try the same thing, and was not content till he had made his first attempt. Deprived of the use of his hands, why not try his mouth! A butterfly that had fluttered into the cottage was caught and transfixed; a rough desk extemporised, and with such materials as a sixpenny box of

paints afforded, he made a sketch of the insect. Delighted with his success, he determined to persevere. A light deal desk was made after his own directions, on which to fix his paper; the picture he was about to copy being fastened above, or if large, hung from the top of the bed by tapes; he always drew in bed, his head being slightly raised by pillows. A pencil about six inches long and bound round with thread was put in his mouth, and with this he sketched his subject. A saucer of Indian ink was prepared, and a fine camel-hair brush was dipped and placed in his mouth by the attendant; these brushes were sometimes not more than four inches long. In this way he produced the most exquisite drawings, equal to fine line engravings, which were sold for him by his friends and patrons, some of them finding their way into the highest quarters; and thus he was enabled to experience the delight of feeling that paralysed as he was, he was not a mere burden, but was able to contribute to his own support.

Several of the most beautiful of his works are now in America, and we believe we are right in saying that as much as twenty-five and fifty pounds apiece have been given for them. Another very fine work, a copy of 'St John and the Angel,' about eighteen inches by twelve, is in the possession of Robert Hanbury, Esq., of Poles Ware, Hertfordshire, and is wonderful in its power and delicacy. In the copies from Rembrandt, Carter has so completely caught the peculiar touch and style of the great master, that even a connoisseur would have some difficulty in distinguishing them from the original.

Carter tried various styles—water-colour, chalks, mezzotint, and line drawing; but it was the last in which he succeeded best, and which best displayed his great delicacy of touch. The chalks required too great pressure, and fatigued him so much that he was only able to finish two or three pictures in this style, a masterly head of St Peter being one; but the grand sweep of the unbroken lines in these shews, we think, his talent more than any of his works.

He found many kind friends who interested themselves in his work, and supplied him with subjects to copy; notably amongst these, Miss Hanbury of Holfield Grange, now wife of the Dean of Winchester. Mr Richmond the artist also came to see him on several occasions, and speaks of him thus in a letter: 'The first time I saw him [Carter] I was taken to his cottage by the Rev. Charles Forster, vicar of Stisted, Essex; and the impression of that visit

I shall never lose, for the contrast of the utterly helpless body of the man with the bright and beaming expression of his face, which only a peaceful and clear spirit could raise, was a sight to do one good. It was as it were "the face of an angel," and I always think of him in connection with that passage.' This latter remark is no exaggeration, for Carter was more than ordinarily handsome, of that old Roman type so common amongst the agricultural labourers in Essex, which ill-health and suffering had only improved by adding refinement to his well-cut features; and the expression of deep humility and patience was most touching in its earnestness. Richmond, speaking elsewhere of his works, says: 'His power of imitation was extraordinary—I mean it would have been extraordinary in one possessing hands to execute his thought with; but to see him with his short pencil between his lips executing with the greatest precision and skill intricate forms and describing difficult curves, filled me with wonder and admiration.'^[1]

Carter lived for fourteen years in this helpless condition, during which time he was a constant attendant at the church. A light frame and mattress, on which he lay perfectly prostrate, was lifted on to a sort of little wheel-carriage, and thus he was carried into the church, and lay during the service. Useful for locomotion, this carriage, sad to relate, was the cause of his death. One day, the lad who was wheeling him about, lost his hold at the top of a hill; the carriage ran back with violence against a wall, and upset the poor fellow into the road. From that day he sank rapidly, and died on the 2d of June 1850.

There was a post-mortem examination; and the injured portion of the spine was removed, and presented by Professor Hilton to the Museum of the College of Surgeons, London, 'where it remains,' as he said in lecturing on the case at the College, 'a typical specimen almost unique in interest.'

[The sight of the drawing of the 'Virgin and Child,' by Carter, which has been submitted to our inspection, is eminently suggestive of what may be done in the most adverse circumstances, and also rouses sentiments of profound regret at the sudden and unforeseen death of a being so highly gifted with the light of genius.—ED.]

FOOTNOTES:

[1] See *Memoir of Carter*, with Illustrations, by Rev. W. J. Dampier. Simpkin and Marshall. 1876.

THE LAST OF THE HADDONS.

CHAPTER XIX.—MRS CHICHESTER'S ARRANGEMENT.

WHEN an hour later, I re-entered the drawing-room to make my adieu to Miss Farrar, I found that the aspect of affairs had altogether changed. She was lounging in her favourite attitude of negligent ease, in a low chair, playing with the appendages to her watch-chain; and opposite to her sat Mrs Chichester.

Marian did not give me time to speak, hurriedly commencing, with haughty graciousness, the moment I entered the room.

'Oh, it is Miss Haddon.—Come in, Miss Haddon. I am sorry to disappoint you; but I have been thinking the matter over since I spoke to you, and have come to the conclusion that I shall not require your services. The truth is I could not feel quite sure that you would suit me, and therefore I have made another arrangement—a much more satisfactory one.'

For a moment I did not quite comprehend the state of affairs, asking myself if she could have so far misinterpreted my words as to suppose that I had expressed a wish to remain with her. Then the truth flashed upon me, and I calmly replied: 'It is quite possible I might not have suited you, Miss Farrar. If, as I suppose, you have made an arrangement for Mrs Chichester to reside with you, I believe you will find her much more amenable and easy to get on with than I might prove to be.'

Marian looked at me doubtfully, not quite sure whether to interpret my words favourably or not. Mrs Chichester's lips closed tightly for a moment, then she said with her accustomed gentleness and suavity: 'The arrangement between Miss Farrar and myself is so essentially different from ordinary engagements, Miss Haddon; simply a friendly one.'

'Yes, indeed,' said Marian, with a grand air. 'Accepting an occasional little offering' (here I knew she was quoting) 'is quite different from receiving a salary, you know.'

I cheerfully agreed that it was different; and was mischievous enough to congratulate 'Miss Farrar' upon having found so disinterested a friend in the time of need.

With heightened colour, Mrs Chichester explained that she had only done what any moderately good-natured person would do, in offering to stay with one who had been deserted by those who ought not to have deserted her.

'Yes; that's what I call it!' said Marian eagerly catching at the word. 'I've been deserted by those who ought not to have deserted me! And here's Caroline, that I never cared for, and who I thought never cared for me, turns out my best friend. Caroline had taken a great fancy to me from the beginning, only she was afraid of shewing it, in case Lilian should be jealous. But since my sister has chosen to desert me as she has, she can't complain about my choosing a fresh friend. As you know, I have done all I could to make things pleasant for Lilian. No one in the world could act more generously than I have done to her. Any one might tell that, by the heaps and heaps of things which have been taken out of the house, without my saying a word. And then the piano, when it was found that it would have to be sold on account of being too large for the cottage, I paid the price it cost two years ago. Two hundred and fifty pounds for a second-hand piano, Caroline! I shouldn't mind if I'd been treated accordingly. But to go away like this, without so much as saying thank you. As Caroline says, it is treating one too bad; it really is!'

I glanced smilingly at Caroline's flushed face, and then wished them good afternoon.

'I hear that you are going to stay at the cottage, Miss Haddon?'

'For three or four months I am, Mrs Chichester.'

'Until you find another engagement, I presume?' she asked, eyeing me curiously.

'Until I make another engagement,' I smilingly replied.

But the 'three or four months' had aroused her suspicions, though I did not perceive in what way.

'You have made the best of your sojourn at Fairview, Miss Haddon'—softly.

'The very best, Mrs Chichester,' was my cheerful response; although I did not see the whole of her meaning, as I was to see it later. I knew enough to be sure the drift of it was not very friendly. One thing was very palpable—I made no advance in Mrs Chichester's good graces.

They followed me to the hall with messages for Lilian.

'I can't forget that she's Pa's daughter, you know,' said Marian, once more striving to be generous. 'Give my love to her, and tell her not to hesitate about sending for anything she may require from the garden or what not; she will miss things so at first, you know. And I don't see why she shouldn't have milk; cook said we have more than she can use just now. If we go on keeping two cows she shall always have it. And say that the very first time we drive out I will call at the cottage.'

Saunders, who opened the door for me, drew his hand across his eyes as he strove to stammer out a message to the 'dear young mistress.'

'Of course you will come to see her; she will be desirous to hear how you are getting on, Saunders,' I replied, beginning to find some difficulty in keeping up my own courage. But there was more to try me yet. Before I could make my escape, every servant employed in or about the house had crowded into the hall, down to Tom the garden-boy.

'Tell the dear young mistress our hearts ache for her.' 'Tell her there isn't one here as wouldn't go barefoot to serve her. God bless her!' 'Tell her her kindness to mother will never be forgotten as long as I live.' 'Why didn't she let us say good-bye, Miss Haddon?' 'Why didn't she shake hands with us before she went, Miss?'—they asked one after the other.

The wisdom of our getting her away as we did was manifest enough. 'It would have been more than she could have borne,' I replied, in a broken voice. 'But it will do her good to hear of your shewing so much kindly feeling, though she never doubted your attachment to her. And of course she expects that you will all go to see her.'

'Ay, that we will!'

Then I got my own share of parting good-wishes, as we shook hands all round, not at all disturbed in the process by the sudden slamming of the drawing-room door and the violent ringing of a bell.

Satisfactory as it all was from one point of view, I congratulated myself upon having contrived to spare Lilian this scene, as well as the final good-bye to the home that ought to have been her own.

I turned from the main road and walked slowly down across the fields at the back of Fairview until I reached the stile at the end of the lane. Then seating myself upon the cross step, I yielded to a little sentiment, telling myself that there must be no such indulgence at the cottage for some time to come. We needed our full share of common-sense to keep the atmosphere healthy. It was all very well trying to assume philosophic airs about wealth; it did very well in my own case, for instance; but I really could not see that it was better for Lilian to lose her large fortune—and so lose it. Into what different channels would the money have passed from her hands, how different a class of people would have been benefited from those who would now be the recipients of it. Granted that Lilian herself might be as happy in the future as though she possessed a large income, how many would be the worse for her not possessing it. The other was already developing a mean nature, and would grudge expenditure upon anything which did not immediately minister to her own gratification. And so forth and so forth I complained to myself in the short-sighted way with which many of us are apt to judge when looking at a question from one point of view only. I did not even take into consideration the fact that the loss of fortune had already brought about one good effect—that of making Arthur Trafford appear in his true colours, and so sparing Lilian from much misery in the future.

'How did she bear it, Miss Haddon?'

I looked up to find Robert Wentworth standing on the other side the stile. I rose, shook hands, and replied: 'As you might expect she would. But we contrived to spare her a final parting scene;' going on to tell him how we had managed it.

'A good idea. And Mrs Chichester has stepped in, has she?' he added musingly. 'Well, I suppose that might have been expected too. Trafford will have a useful ally.'

I told him of the offer I had received, smiling a little over the recital.

'Fortunately you are not like other women; you can smile at that sort of thing. And you will not, I trust, be again subjected to anything of the kind.'

You will remain at the cottage as long as you need a home now?'

'Yes,' I replied in a low voice, feeling the hot colour cover my face in my confusion at hearing such an allusion from him; wondering not a little how he had come to know what I had been so reticent, even to those I loved best, about. His tone and look seemed, I thought, so plainly to imply that he did know.

'But I suppose that is forbidden ground just at present?' he went on, as I imagined answering my very thoughts.

'Yes,' I whispered stupidly; shy of talking about my love affair to him, yet a little ashamed of my shyness, as more befitting a young romantic girl than myself.

'I will obey'—glancing down at me with grave pleasantness—'if you will consent that some limit shall be put to the restraint. Shall we say three months?'

I smiled assent. He really did know then; even to the time Philip was expected. I did not like to ask him how he had gained the knowledge, as that might lead to more talk upon the subject than I cared to enter into. In fact I was completely taken by surprise, and not quite equal to the occasion.

But I soon contrived to account for his knowledge of my secret. My engagement was well known to Philip's brother and the latter's friends; and it was quite possible that Robert Wentworth might know some of them. But however he had found it out, I was quite content that he should have done so. It would be all the easier to pave the way towards a friendship between Philip and him, by-and-by. For the present I quietly returned to the subject which I believed to be most interesting to him, and we talked over Lilian's prospects hopefully if a little gravely, as we walked slowly on down the lane.

'You think there are really some grounds for hoping that she may forget him?' he asked anxiously. 'I should not judge hers to be a changeable mind.'

'Changeable! No; if she had really loved Arthur Trafford, as she fancied she did, there would be indeed no hope.'

'Fancied?'

'Yes; I firmly believe it *was* fancy. She never loved the real Arthur Trafford; she is only just beginning to know him as he is.'

'Well, I suppose it is all right, so far as she is concerned; and yet—constancy in love and friendship is part of my religion. One does not like to have that faith disturbed?'—with what I fancied was a questioning look.

'You forget that Lilian was almost a child when the acquaintance commenced; barely sixteen. Though I hold that she will be constant to her love, in even ceasing to care for Arthur Trafford. Do not you see that she has never known the real man until now—that in fact she has been in love with an ideal?' I replied, under the impression that he was putting the questions which he wished to be combated, and willing to indulge him so far.

'It must be rather hard upon a man to discover, after a long engagement, that he does not accord with his lady-love's ideal—all the harder if the discovery *does* not happen to be made until after marriage,' he said; '*and* I think you will have to acknowledge that the ideal you talk about ought to preserve a woman from falling in love with the counterfeit, rather than lead her to it.'

'You are talking about a woman, and I a girl.'

'You must not forget that she was old enough to engage herself to him. How if she had continued in her blindness until too late—how if she had become his wife?'

'If she had become his wife before her eyes were opened, Lilian would in time have recognised her own weakness in the matter, and blamed no one else. Moreover, she would have made a good wife.'

'Yes; I suppose it would have been patched up that way; by the slow heart-breaking process of smiling at grief and all the rest of it. And of course you mean to imply that her fate would have its use, in the way of serving as a warning to incautious youth against being in love with ideals?'

'Of course I meant no such thing, and you know that I did not,' I replied, laughing outright. 'I should think there is need for a great deal of the ideal in all love, to keep it alive.'

'Ah, now we are getting on to fresh ground,' he said enjoyably. 'Let me see, the proposition is that love needs a great deal of the ideal to keep it alive;

and yet'——

But I was not going to indulge him with a disquisition upon love; giving him a Roland for an Oliver, in my own fashion: 'No one is more glad that Lilian's has turned out to be only an ideal love, than yourself.'

'Ah, that is not spoken with your usual accuracy of statement. Should you not rather have said that no one could be more sorry than I that her ideal did not preserve her from'——

'She is preserved; and that is what you care most about.'

He smiled. 'Well, perhaps it is.'

When we arrived at the turn in the lane leading to the cottage, he took leave of me. I did not invite him to go in with me, and I think he quite understood my motive for not doing so, this first evening of our entrance upon a new life. But he responded as heartily as I could wish, when I expressed a hope that he would come as frequently as he could to the cottage; adding that we should expect a great deal from him now that he had shewn us how helpful he could be in times of emergency. 'Besides, it will be good for us, I suppose, to occasionally see one of the lords of creation, lest we should come to forget that we are but women.'

'Yes; you at least require to be occasionally taken down.'

'You must consider me very amiable to say that in my presence.'

'Did you hurt your hand when you struck it upon the seat the other day? From the violence of the blow, I was afraid you would suffer a little afterwards.'

'Surely you did not call that temper?'

'O dear, no; I did not venture to call it anything. What did you call it?'

'Righteous indignation,' I calmly replied.

'Righteous indignation! O indeed. Then if I have cause to be angry with a person, it is righteous indignation to attack his friend, and enforce my arguments by blows upon a piece of wood?'

'You are worse than usual to-night; but come soon to see Mrs Tipper and Lilian,' I said, smiling.

'Let us shake hands upon that.'

I stood looking after him a moment, as he walked away in the twilight with the long, easy, swinging motion natural to one of a powerfully built frame. Moreover I knew that his mental power was at least in equal proportion to his physical strength, and had no fears as to Lilian's happiness, by-and-by. The only drawback to her happiness would be the remembrance of past weakness, and that may not be the worst kind of drawback one could have in the time of prosperity.

As we sat that night by the open window, the May moon flooding the lovely scene outside, resting, as I persuaded myself, tenderly on *my* house by the hill-side, nearly facing us, from the other side of the village, we told each other that some people were not intended for a life of luxury and grandeur, and that we were of their kind; heartily agreeing that we were now in our proper sphere.

Dear little Mrs Tipper was a bright example of content and happiness. Never had I seen her at such advantage as at present. Energetic and cheerful, company manners packed away with her best dresses, she was a happy little woman again, bustling about her small domain in a print-dress and large apron, and finding a new pleasure every ten minutes. There was not even the drawback of anxiety about Lilian in her mind.

She had confided to me that she had never felt quite satisfied with Arthur Trafford as a husband for her niece, though she had been afraid to trust to her own judgment in the matter, lest her want of appreciation might arise from her ignorance of society and its ways. But she quite shared my opinion as to the probability of Lilian's getting healthily over her disappointment. There was nothing to prevent her giving expression to her real sentiments about the change in her life, and Lilian had the pleasure of knowing that auntie at least could not be said to be suffering from reverses.

'It does me real good to do it, my dear; it does indeed!' she ejaculated, when I offered to wash the tea-things for her. 'It all comes so natural and handy again. Little did I think, when I packed up these and a few other things and brought them to brother's unbeknown, that I should have the pleasure of washing them again. I couldn't bear to sell them, because they were father's present to me on my wedding-day, and nobody has ever washed them but me. You wouldn't believe how fond I came to be of this one with the little

chip in it, washing it every day for thirty years. John, he used to be sitting there by the fire with his pipe,' she went on, pointing to a corner, and evidently seeing in her mind's eye the old cottage home, 'and telling me how things had been going on at the office in the day; and the news out of the papers—very fond of the papers, John was; and he had the reading of them when the gentlemen had done with them. And I standing here washing up the tea-things, and saying a word now and then to shew him I was listening.—It all comes back so plain—doesn't it?' she added, apostrophising the cup with tearful eyes. 'I can almost hear the cuckoo clock ticking against the wall.'

It was time to put in a word, which I did as gently as possible, and she was presently smiling cheerily again.

'You mustn't think I'm low-spirited, dear; no, indeed. There was nothing in those old times to make me sad; and John's in heaven. All this only reminded me, you see.'

'I hope you will find Becky useful.'

'That I shall, dear; she's so handy and knows about things so much, more than you might expect. It would never have done to have a fine lady, afraid of spoiling her hands, for a servant here, you know.' Stopping a moment to open the door and call out to Becky, at work in the little scullery at the back: 'You won't forget to order the currants and candied peel for the cake to-morrow, Becky. It must not be said we hadn't a bit of home-made cake when there's dripping in the house. A good thing I thought of ordering tins; but that's what I said to the young man; leave it to me to know what is wanted in the kitchen.'

'I won't forget, ma'am,' called out Becky in return.

'And, Becky'—trotting to the door again—'there's bedroom candles and soap to be thought of when the grocer comes in the morning. There would be no sense in having to send into the town when we could have it all brought. Don't forget to look at the little slate, if I'm up-stairs, to see if there's anything else wanted.'

And so on, and so on, until Lilian and I at last got her up to her bedroom, fairly tired out, but as happy as a queen.

I was rejoiced to see how much good it did Lilian to find that the dear little woman took so kindly to cottage ways.

'How much worse things might have been, Mary. How thankful I ought to be!'

'Yes; I think you ought, dearie.'

She and I stood for a few moments at my bedroom window, gazing at the peaceful scene without. My room, as they already called it, was at the back of the cottage; and the window commanded a view of the woods on the one side, and the beautiful open country on the other. But we tacitly agreed to avoid sentiment; we were not strong enough for that yet. We just let the outside peace and quiet steal into our hearts, as we stood there together for a few minutes, my arm about her, and her cheek resting on my shoulder, and then bade each other good-night without any demonstration.

THREE WONDERFUL RAILWAYS.

THE 'Three Wonderful Railways' which we propose to notice are the Brenner, the Semmering, and the Rigi lines.

The Brenner line, which lies between Innsbruck and Botzen, and constitutes a portion of the railway connecting Bavaria and Italy, although it passes through tunnel after tunnel, until the weary traveller is prone to abandon all hope of obtaining any view of the scenery, nevertheless is not content with getting *through* the pass, but proudly mounts to the top and passes over the summit level before beginning the descent. The pass is a low one, indeed one of the lowest over the main Alps; but then it must be borne in mind that this 'low' Alpine pass is four thousand seven hundred and seventy-five feet high; no mean altitude for a railway. Neither is it merely for its height that the writer is induced to describe it, nor for its pretty scenery (it can scarcely be called grand), but for the extraordinary engineering difficulties which the making of the line presented, and which have been so ably and ingeniously overcome. Some of the more ordinary difficulties of the district traversed by the line may be gathered from the fact that the ascent from Innsbruck involves no fewer than thirteen tunnels, while in the descent there are ten. The line, clinging to the side of the mountain, has to penetrate projecting rocks so frequently that it strongly resembles, except in the lovely peeps obtained in the momentary intervals, the Metropolitan District Railway; which is dignified by the name of the 'Daylight Route,' because it is not always underground. In its course up the valley the railway on one side sometimes rises above the level of the carriage-road on the other, sometimes finds itself considerably below it. In climbing the pass, the rail of course never ceases to ascend; while the more humble road bows to the obstacles it encounters, and rises and falls according to the nature of the ground. At last, Nature seems determined to put a stop to the encroachments of steam, and the railroad finds itself directly facing a lateral valley, the bottom of which lies far below it.

Now how to get over this valley and pursue the direct course up the main valley, seems a problem. The road would descend to mount again; not so

the rail. The difficulty and its solution may be well realised by imagining a railway cut in the face of a long row of houses (which must be supposed to represent one side of the main valley). This railway, starting from one end of the row at the basement level, gradually rises, in order to pass over the roofs (that is, the head of the pass) of another row of houses at right angles to and at the end of the first row. In its course it encounters a side-street (the lateral valley) with no outlet at the other end, and which is too broad to be spanned with a bridge. Now the line at this point has reached the second floor; and to get to the opposite houses and pursue its course, it turns a sharp corner, runs along one side of the blind street, crosses it at the further or blind end by merely clinging still to the houses, returns along the other side, rounds the corner into the main street, and resumes its course. During this *détour* the ascent has been continued uninterruptedly, so that on the return of the line to the desired opposite corner it has mounted to the third floor. Applying this illustration, the reader will perceive the ingenious yet simple solution of the difficulty.

The effect on reaching the first corner of the lateral valley is most remarkable. The line is seen at the opposite corner far above the traveller's head entering a tunnel; and how he is going to get there is a puzzle which he hardly solves before he finds himself on the spot looking down on the corner he has just left, wondering how he ever came from there.

But even this striking instance of engineering triumphs is eclipsed by a portion of the line on the other side of the pass. Pursuing the direction he has already come, the traveller has stopped in the descent at Schelleberg, a small station perched at an enormous height above an expansive valley, when he perceives a village five hundred feet almost perpendicularly below him, which he is informed is the next station. It would not take long to reach this village (Gossensass) in a lift, but in a train he has to run far past it, always descending, then turn completely round, and run back again in the direction he has come from, but now on a level with Gossensass. But at the point where this evolution has to be made occurs another lateral valley, much longer than the first alluded to; and this time one which it is not desired to cross, as Gossensass lies as it were on the basement of the house on the third floor of which is Schelleberg. The train proceeds, therefore, to turn the corner into the side-street as before; but without pursuing the street to its end, it suddenly dives into one of the houses, makes a complete circuit

of its interior, and emerges in the opposite direction; returning to the corner whence it started by means of the same houses, but on a lower floor. The appearance of this engineering feat is quite bewildering; and after tunnelling into the hill on the sharp curve, and then finding himself proceeding back towards the place he has just come from, the traveller experiences a difficulty in believing that the line parallel with him, but almost over his head, is the one he has just been passing over. Shortly after Gossensass has been left behind, the train passes close under and almost into the gigantic and formidable-looking fort of Franzensfeste; and then after a few more tunnels, gradually leaves the Alps behind, and descends by Botzen into the Italian plains with all their luxuriant foliage. It should be added that the Brenner line was completed in the year 1867, and that its numerous engineering difficulties entailed an average cost of about twenty-eight thousand pounds per mile.

The Semmering line, which lies south of Vienna, on the way thence to Trieste, and which, until the completion of the Brenner, was unique in the boldness of its conception and execution, as also for the height to which it attained, is now eclipsed as to altitude in more than one instance; but as a magnificent engineering achievement it can hold its own against any railway at present constructed. While resembling the Brenner in many particulars, it differs from it in some important points. Among these differences is the fact, that whereas the Brenner line actually surmounts the pass, the Semmering, on reaching a height of two thousand eight hundred and ninety-three feet, or about four hundred feet short of the summit, suddenly, as if tired of so much climbing, plunges into the ground, and only emerges again nearly a mile off, and on the other side of the pass, which it then proceeds to descend. It is thus that it may be said to have been the prototype of its great successor, the Mont Cenis.

The Semmering further differs from the Brenner in what may perhaps be considered its most remarkable feature—namely, its viaducts. For while the latter avoids many a yawning abyss by some ingenious curve, the former seems almost to seek the opportunity for a magnificent display of span. These viaducts occur frequently, being as many as fifteen in number; and in many instances are formed of a double row of arches, one standing on the other in the manner sometimes adopted by the Romans in the construction of their aqueducts. To realise the grandeur of these viaducts, they should not

be seen merely from a train, but the traveller should contrive to view them from below. The finest is over the Kalte Rinne, and consists of five arches below and ten above. The line also in places requires to be protected from avalanches of stone or of snow, and this is effected by means of covered galleries, such as may be seen on so many Alpine roads. The tunnels too are as numerous as the viaducts. In fact the train no sooner emerges from a tunnel than it finds itself skimming over a viaduct, only to plunge once more into a tunnel or a gallery. The device for crossing a lateral valley described above in the case of the Brenner is also resorted to here, and need not be further alluded to.

The proportionate cost of the Semmering railway was more than double that of the Brenner, being about sixty thousand pounds per mile. This may be accounted for partly by the fact, that the former was constructed and opened thirteen years prior to the latter; by which the latter was enabled to reap the benefit of the engineering experience acquired in the progress of its predecessor. But the chief cause of this enormous difference in the cost of construction lies in the different modes adopted for overcoming obstacles; and the vast viaducts of the Semmering entailed an expense which was wisely and ingeniously avoided in the construction of the Brenner.

The gradients, as may be supposed, are very steep on both these railways, and the rate of speed not great. On the Semmering a long train has to be divided into two or three portions, to enable it to surmount these steep slopes, which frequently are as rapid as one in forty, even on the viaducts and in the tunnels. The reader has only to notice the numbers on the gradient indicators by the side of an English railway, to be able to judge what an incline of *one in forty* is like.

But if one in forty seems steep, what shall be said of one in four, which is the gradient of a large part of the Rigi railway? No doubt the ascent of the Rigi has come to be regarded much as the Londoner regards the ascent of Primrose Hill; though in the latter case the hardy traveller has to use the means of locomotion with which Nature has provided him in order to reach the summit; while in the former he merely seats himself in a railway carriage at the base of the mountain, and is deposited without the smallest exertion on his part at or nearly at the top.

Steam here, as elsewhere, has almost entirely superseded the old means of travel. But as if it were not a sufficiently stupendous undertaking to have one railway to the top of a mountain, two have here been constructed, one having its base at Art on the Lake of Zug, the other at Vitznau on the Lake of Lucerne. Taking the latter, which was first accomplished, the height to be scaled is four thousand four hundred and seventy-two feet from the level of the Lake of Lucerne, the total altitude of the mountain being five thousand nine hundred and five feet above the level of the sea. Of this four thousand four hundred and seventy-two feet, the rail accomplishes all but one hundred feet or so. To do this, an excessively steep gradient must be constantly maintained, as the formation of the mountain does not admit of wide sweeps, détours, or zigzags; but the course pursued is round the shoulder, then along the ridge which communicates with the topmost heights, and finally up those heights themselves, a distance of not more than eight miles. It is thus that a gradient of one in four becomes a necessity. Let the reader mark out a distance of four feet, and at one end place a foot-rule perpendicularly. A line drawn from one end of this distance to the top of the rule at the other end will indicate the gradient of one in four. It is a steeper incline than horses and carriages are expected to surmount, yet trains pass up and down constantly without difficulty, and it is confidently asserted, without more danger than on ordinary lines. The rate of speed is of course not high, one hour twenty minutes being occupied in the ascent, and a slightly less time in the descent.

The construction of the train is remarkable. It consists of an engine with small tender and but one carriage. An ordinary locomotive would be powerless on such steep gradients, therefore one of peculiar construction is used, which is of itself an extraordinary object. On level ground it appears as if it had completely broken down and lost two of its wheels. This arises from the fact that, being expressly intended to work on an incline, it is built in such a way as to compensate for the incline and maintain the boiler in a vertical position. This boiler in appearance resembles nothing so much as a large beer bottle standing upright when the train is ascending or descending, but very much out of the perpendicular when on level ground. The small tender is of course constructed so as to have its floor level when on the incline. Its sides are of wire-work, and are made thus with the object of reducing the weight as much as possible; an object which is also carried out both in the engine and in the carriage, which are as light as they can be

made, it not being necessary to prevent the wheels jumping from the rails by the pressure of great weight as on ordinary lines, where a high rate of speed is attained. This tender, in addition to its usual functions, performs the office of carrying surplus passengers on an emergency.

The carriage is an open car, rather resembling a block of low pews taken from a church, placed on wheels, and surmounted by an awning, with curtains to let down at the sides, as a protection against the weather. The seats, which are nine in number, and accommodate six persons each, all face one way—namely, downhill; and a fixed footstool serves to keep the passengers from sliding off their seats. Contrary to the usual order, the carriage on this line precedes the locomotive in the ascent, and is pushed instead of being pulled up the incline. In the descent the locomotive takes the first place, and exercises merely a retarding force. It will be seen, therefore, that the two portions of the train are necessarily in close connection when in motion, and for this reason, as well as for purposes of safety, couplings are dispensed with. Each portion is provided with its own brake-power, so that in the event of the engine getting beyond control, the carriage can be stopped and rendered entirely independent, since it is not coupled to the engine. The brake is of course of a totally different kind from that in ordinary use, which would be of no service whatever on such inclines, as the wheels, even if the brake were so powerful as to stop their revolution, would slide down the hill by the mere force of gravity. Here, however, the brake consists in an ingenious adaptation of the means which are employed in driving the engine.

The roadway is laid with three rails, the outer ones being of the usual kind, while the central one is a long-toothed rack, of which the teeth are perpendicular. Into this rack fit the teeth of the pinions or cogged-wheels with which both engine and carriage are provided. Now it is apparent that if these wheels are put in motion they will pull the train along the rack; and if stopped and held firmly in one position, they will prevent any onward motion by the mere clinching of the teeth, to use a common expression. One of the cogged-wheels, then, which are attached to the engine is the driving-wheel, and forms the special means of locomotion, while the other cogged-wheels of course merely revolve without exercising any traction. But immediately a halt is required, all these wheels become of equal importance, and supply a prompt and most efficient brake, since directly

they are locked, the train is brought to a stand-still, and held as in a vice even on the steepest inclines. Other brake-power is also applied; but this would seem to be the efficient means of control in case of accident.

It will be seen, therefore, that the danger of the train running away is carefully provided against; and no less care has been bestowed on the means for preventing the train leaving the rails, a danger fully as alarming as the other on a line which, for the greater part of its course, runs on the brink of a fearful precipice. Along each side of the central or rack rail, which is raised some inches from the ground, runs a projecting edge; and the engine and carriage are provided with two strong rods, the ends of which are bent in such a manner as to pass under these projections. Any jerk or jump of the train, therefore, would be resisted by the pressure of these bent ends against the under surface of the projections.

It is not within the province of this paper to speak of the hotels which form such huge excrescences on the mountains' sides and top (by no means an improvement on nature), or to allude to the hundreds of tourists who daily swarm in these hotels, or to the hundreds of others who take the journey for the sake of a 'new sensation.' It may, however, be mentioned that from one of the stations (Rigi Staffel) runs a branch-line which communicates with the Rigi Scheideck, where is situated one of the largest of the hotels; and that the line from Art joins the Vitznau line near the summit. It will thus be seen that the Rigi is traversed in all directions by railways; and according to the opinion of an intelligent Swiss with whom the writer conversed, these railways owe their origin to the fact that the Germans, who have now become such a travelling nation, will not penetrate in any numbers where they cannot travel by horse, by carriage, or by steam; and he further indicated his opinion of Germans by adding, that no doubt ere long, a lift would be constructed to work up and down the perpendicular face of the Matterhorn for their benefit. Who shall say that such a thing is impossible?

SUNSHINE AND CLOUD.

IN TWO PARTS.

PART I.—SUNSHINE.

CHAPTER VII.—ISAAC IS TOUCHED.

ISAAC allowed a few days to elapse before he paid his promised visit; and then one evening, after an early chop, he sallied forth in search of the address on Miss Faithful's card, No. 61 New West Road, Holloway. He found the house without much difficulty; and a snug little house it was. His three friends were at home, and appeared very pleased to see him; that is to say, the two younger members of the party appeared pleased, the elder lady being in a more or less somnolent state in the arm-chair, and to some extent unconscious of his presence. The first greetings and the general remarks upon the weather being ended, Herbert proposed some music. Angela turned to their visitor, and asked him his favourite songs. If she had asked him his favourite Greek plays, poor Isaac could hardly have been more nonplussed. He was not much assisted either by the cursory examination he gave a music-case containing a number of her songs, which she considerately handed to him; so he was fain to acknowledge that he did not know any tunes for certain, except a few hymns he had heard in church, *God Save the Queen*, and a few popular melodies he had heard the boys whistle in the streets. So Herbert came to the rescue, and picked out one or two of his favourites for her to sing. She did so; and then Isaac's mind, which had to a great extent resumed its original state of reserve, reopened again to the genial sunshine of her manner and the beauty of her voice; for there was something irresistible to him in this singing of hers; he could not account for it even to himself; but it was the 'open sesame' to his heart and confidence.

She sang several songs and a couple of duets with her brother; and then, as the evening closed in, the three sat at the open window chatting—Miss

Faithful meanwhile being peacefully asleep in her chair. Isaac, under the influence of the spell, experienced a nearer approach to delight than he had ever done before, and quite unbosomed himself to his new friends. He gave them an account of his parentage, of his home, or rather lodging, at Dambourne End, of his cottages and garden-ground, and of his resources and prospects generally. They listened with evident interest, and with a few judicious questions, obtained the complete biography of their visitor.

At length the gas was lighted, supper was brought in, and aunt aroused from her doze. After the meal, Angela went up-stairs with her, and Isaac and Herbert were left to themselves. But there was not much to be got from the former in the way of conversation, now the spell was removed; and as he was in the habit of retiring to bed early (to save lights), and as he had partaken of an unaccustomed meal in the form of supper, he soon grew very drowsy, so arose to say good-night. Herbert called his sister down-stairs to go through this salutation, and said he would accompany Isaac on his walk to the coffee-house and smoke his cigar by the way. At parting, he said he should look Isaac up one evening, and if agreeable to him, they would go together to some place of amusement. But in the meantime he was to stand upon no ceremony, but to come and see them whenever he would.

CHAPTER VIII.—THE LEAP.

About a week after Isaac had paid his first visit to New West Road, he was one evening finishing his solitary meal, when Mr Herbert Faithful was announced. 'I am come to take you back with me,' he said, 'for Angela has threatened me with an evening to myself, as she is very busy trying on a dress for a ball to which we are going; and *I* can't stand loneliness if *you* can; so come with me, and we'll have a cigar together.'

'I will go with you,' said Isaac; 'but I cannot smoke; I never tried.'

So in a few minutes they were on their way to Miss Faithful's house, and the conversation turned on the coming ball.

'I quite imagine it will be rather a showy affair,' said Herbert; 'and I more than half suspect that it is arranged for a special purpose. It is given by a Mrs Ashton, an old friend of my mother, and her son is an old sweetheart of Angela. He has never proposed exactly, as he was considered too young;

but this ball is to be given on his birthday, and I expect Angela will come home an engaged girl. She is a dear girl,' he continued with a sigh; 'but it is only reasonable that she should be getting married before long.'

Isaac's heart gave a great bound, but he answered nothing. His companion was silent also after this, and in a few minutes they reached his aunt's house.

To her brother's apparent surprise, Angela was in the hall to welcome them. 'It is all very fine, Master Herbert,' she said, 'for you to run off as soon as I promise you an evening to yourself down-stairs; but do not think you are to monopolise Mr Webb's company.'

'But how about the dress?' asked Herbert.

'Oh, that did not take long, for it fits beautifully. But somehow or other I do not care so much about the ball as I did.'

'Well, I like that!' said Herbert. 'Perhaps you are afraid you will have to sit down a good part of the evening, for want of a partner. If you are asked to be any one's partner, be careful to ascertain that it is for the dance *only*, and not for anything beyond that.'

'Be quiet, Herbert, do,' said his sister, colouring.

'Don't be angry, dear, for a little fraternal solicitude. But come, suppose you give us a rehearsal of the songs you intend to sing. Mind there is nothing about love in them.'

'Herbert, you are incorrigible; you don't deserve a song.—What do *you* think, Mr Webb?'

Mr Webb coughed, coloured, stammered, and finally said he 'hoped she'd sing one.'

'Well, it would be a shame to punish the innocent with the guilty, so I consent; but you must stop your ears, Herbert.' With these words, Angela looked out one or two songs, opened the piano, and once again wove the spell around Isaac's mind and heart; so much so, that though he was not of a jealous nature, he yet could not bear the thought that she would sing these same songs, and captivate the ear of the man who would in all probability ask her to be his wife. No; the idea was horrible; and as he listened, and the spell wrought its power around him and within him, his heart throbbed

bolder and bolder, and he resolved to make a rush and forestall his hopeful rival. Yes; he would offer his cottages, his garden-ground, and his heart; and would not, moreover, risk his chance by waiting until this hateful ball was over. If he did, it would be lost. And why risk *any* delay? No; he would not; so determined he would act that very evening.

But would he be successful? He would have felt but little doubt had there been no rival, or only a weak one, to forestall; and even as it was, he did not consider his case was bad, much less desperate. It was scarcely likely that Angela would throw away a certain chance for an uncertain one, especially when that chance was Isaac Webb—a deep shrewd young fellow, and backed moreover by the cottages and garden-ground. So when the evening had worn itself away, and it was time for him to take his departure, Isaac requested Herbert to walk part of the way home with him, as he had something he wanted to say to him.

'Do you think,' he asked Herbert, when they were on the road, 'that your sister has made up her mind to accept Mr Ashton?'

'I do not know that he will ask her,' Herbert answered; 'but if he were to do so, I had no doubt she would until just lately; but now I am not quite so sure about it. But excuse me; why do you ask such a question?'

'Because,' returned Isaac, 'I—I have been thinking of taking a wife, and—well, I—I think I should like to have *her*.'

'Well, you *do* astonish me,' said Herbert. 'And yet,' he continued, after a pause, 'perhaps I can now account for my doubt as to her affection for young Ashton. But you had better ask her point-blank whether she will have you; that is, if you have really made up your mind about it.'

'That is just what I want *you* to do,' exclaimed Isaac. 'I want you to ask her for me.'

'Excuse me, my dear fellow; but it is rather a delicate subject for me—her brother—to put before her'——

'So much the better,' interrupted Isaac. 'It will come better from you, and with more weight than from me.'

'But people would say directly that I had somehow caused you to do it.'

'People need not know anything at all about it,' answered Isaac.

'But you have known her such a little while,' urged Herbert; 'and you may not fully have made up your mind; or you may alter it.'

'No, no!' returned Isaac decidedly. 'I have made up my mind enough, and I would rather you ask her than me. I should not know quite what to say.'

'You would know quite as well as I. However, anything for the dear girl's happiness; and since you will have it so, I will do it. But when would you like me to ask her?'

'Oh, as soon as you can,' said the amorous Isaac.

'Very well. Then if there's a chance to-morrow, I will see about it, and will let you know the result.'

'Thank you,' said Isaac, much relieved. So they shook hands and parted.

The love-sick youth was in a considerable state of excitement all the night long; he tossed about on his bed, and wondered why the traffic outside made so much more noise than usual. At last he fell asleep, and dreamed of Angela—and her expectations. The following morning, contrary to his usual habit, he was very late at breakfast; and when he had finished, had no inclination for his customary stroll through the streets, but sat in his room reading, or attempting to read, two very old newspapers and a playbill. To pass the time, he had his dinner in the middle of the day, and afterwards dropped off to sleep—an unusual proceeding, doubtless caused by his disturbed night. He was aroused about six o'clock by his landlady entering the room.

'A note for you, sir. The lad said there was no answer.'

It was from Herbert, and contained the gratifying announcement that he had executed Isaac's commission, and that his sister, 'much surprised and flattered by Mr Webb's sentiments, could assure him that they were entirely reciprocated by her, and that she would endeavour to make herself worthy of his choice. Would he be so kind as to postpone a visit for a day or two, that she might in some degree recover herself from the flutter of her surprise, and be able to receive him as she would wish?'

Bravo, Isaac! You are a deep dog; and your life and your schemes seem flooded with sunshine.

PART II.—CLOUD.

CHAPTER I.—THE SUN IS SLIGHTLY OBSCURED.

Mr Herbert Faithful in his letter to Isaac had requested him to postpone a visit to his sister for a few days, in order that she might recover herself from the excitement his proposal had occasioned. This may have been partly the truth; but the real fact was that Herbert wished to satisfy himself that Isaac's account of himself was a truthful one, before he and Angela met for the ratification of their engagement. So he took this opportunity to make a hurried visit to Dambourne; and by the brief but well-directed inquiries he made there, was enabled to arrive at the conclusion that Isaac's version of himself and of his circumstances was a correct one. Having thus done his duty as a prudent brother, Herbert sent, as soon as possible after his return, an invitation to Isaac to visit New West Road.

Angela had apparently made good use of the interval to recover herself from 'the flutter of her surprise.' At all events she shewed very few traces of it when Isaac was, for the first time since their engagement, announced. Not that she appeared unduly unconscious of the new relations between them; but she carried off all the constraint and stiffness of manner that were natural under the circumstances, by that unaffected and lady-like self-possession which formed one of her most striking characteristics, and which at once put her too self-conscious lover at his ease. That young man was indeed in such a mingled state of nervousness and excitement, that it is extremely doubtful whether he would have ventured to refer to the happy position she had granted him, but from her meeting him half-way, as it were; for the idea was implied by her manner that there was no need of constraint on his part, for that they met on equal terms, and that she could not but be gratified by his having bestowed upon her his regard. Such at least was the light in which Isaac regarded Angela's manner towards him on this their first meeting as lovers, and it had the effect, as has been stated, of putting him at his ease.

Her brother kindly assisted at this consummation; for he welcomed Isaac with a frank kindness that made the latter consider him, next to himself, the best fellow in the world.

The only member of the family who remained as before was the aunt. Her deafness, poor soul, had, quite suddenly, much increased, and her general faculties had, in proportion apparently, decreased, so that she had become a complete nonentity, and her slate and pencil had all but retired on a handsome competence of illegible scrawls.

After half an hour's general conversation, Herbert pleaded an engagement, and the lovers were (putting Miss Faithful out of the question) left to themselves.

'I was so pleased with your brother's letter,' said Isaac. 'I thought, somehow, that my regard and admiration for you were returned.'

This was not quite what he intended to say; but the part of the ardent lover was so new to him that he could not all at once settle down into it.

'Indeed,' Angela replied, 'Herbert's letter could give but little idea of my surprise and—well, I suppose I need not mind saying it now—gratification. But I cannot imagine what you have seen in me in so short a time, to have caused you to make such a proposal as you have.' Whether she intended it or not, Angela could not have gone more directly to that most sensitive and vulnerable portion of Isaac's temperament, his self-esteem. He received her reply as a well-merited compliment, but he had not the grace to return it.

'I don't exactly know myself,' was his curt rejoinder. 'Don't you think,' he continued after a pause, 'that we may as well be getting married pretty soon? I want to be going back to look after the cottages, and it will come so expensive to be going backwards and forwards; and I have never been used to writing many letters.'

'Oh, you must talk to Herbert about that. When he thinks it right for us to be married, I shall be ready.'

It must be confessed that this was a very practical way of looking at the matter on this the first evening of their engagement; but Isaac looked on the whole subject of matrimony and its attendant evils, courtship included, in a very practical and business-like manner. Such, then, was the opening conversation of these lovers, and it grew no warmer as it proceeded. After a short time, Angela went to the piano and sang several songs, to Isaac's great delight. The spell was again woven around him; and when Herbert returned

home, our hero could have been guided anywhere by him or his sister, had either of them been disposed to do so.

One circumstance in connection with his engagement was a slight satisfaction to Isaac: he would be often visiting at Miss Faithful's house and partaking of her hospitality; so that he would then be able to live more economically at his coffee-shop. Even this, however, would not balance the amount of the expense of his absence from home; so, after mature consideration, he arrived at the conclusion that an early marriage was desirable; for he dreaded the season of courtship, and wanted to get the matter closed. So he decided still to remain in London for the present, and take an early opportunity to urge his views with Herbert.

It did not occur to Isaac that there was anything to cause delay. Surely a respectable young woman could be married at any time, and he did not know of any law preventing them being married to-morrow if they chose. He did not desire, it is true, anything quite so speedy as that, but he considered that say three weeks or a month ought to be sufficient for all preparation. But the mention of some such sentiments as these to Herbert received from him a very decided check.

'Why,' said he, laughing, 'apart from everything else, you and Angela have not even decided where you intend to live. It will take you a month to do that, let alone the furnishing.'

'We shall live at Dambourne End of course,' said Isaac; 'and my lodgings are quite large enough for two people, or can easily be made so.'

'Seriously,' returned Herbert, 'that is quite out of the question; for if *Angela* agreed to it, I tell you candidly *I* would not; for she has always been accustomed to a comfortable home, and you are well enough off between you to have one when you are married. And between you and me, I do not think a little country place, such as you have described Dambourne End to be, is quite a suitable place to which to take a young wife who has spent the greater part of her life in London, and has until lately mixed a good bit in society. Not that she wants to do so again, or to run into extravagance; but to take her away from all her friends and associations, at all events just at first, and for no particular reason, would not be quite the thing, I fancy. I don't want to throw cold-water on your plans, old fellow,' he continued,

laying his hand on Isaac's arm, 'or to seem in any way to dictate; but just think over what I have said, and I think you will see the force of it.'

Isaac was too much astonished at the idea Herbert had broached to make any reply to it, so took his leave.

CHAPTER II.—SHADOWS DEEPEN.

Our hero's cogitations on his way home were cut short on his arrival by a letter which was waiting for him from the old schoolfellow to whom he had confided the care of his estate at Dambourne. This letter was calculated to give him some uneasiness. It was as follows:

MY DEAR SIR—I am afraid there is something not quite right about the stranger who took your lodgings at Mrs Clappen's, or else about the tenants of your cottages, or both; for when I went to collect the rents according to your wish, a week or two after you went away, the people in the cottages all laughed at me; and when I went again a few days ago, they threatened to put me under the pump. The reason that I think Mrs Clappen's lodger has something to do with it is that I have seen him go into some of the cottages at different times; but when I asked his landlady what he did there, she said she believed he went giving away tracts. But this morning she came to me in a great state of excitement saying two strange men were watching her house, and that her lodger had not been out of his room all the morning, and had not had his breakfast, and altogether she thought there must be something wrong. I went back with her and knocked at his door. As he did not answer, and as the door was locked on the inside, I broke it open; but the stranger had gone—probably through the back window and down by the water-butt. Your box is in the room, and I find it is *unlocked*. As I do not know what you may have left in it, I write to let you know about it.—Yours truly,

FREDERICK JONES.

Here was a pretty state of things. This lodger had most likely broken open Isaac's box and abstracted what things of value it contained. Fortunately

there was not very much—only about forty pounds in gold and some title-deeds. He reflected what he should do. Perhaps he ought to go down to Dambourne End at once, but he did not see what good he could do if he went; so he decided to wait until the following day, and let Angela know about it. Accordingly, the next morning he started off to New West Road, and informed Angela and her brother of his ill news. It did not, however, make the impression upon them that Isaac expected; for they made light of it, and said that if his loss were no more than forty pounds, *that* was of no very great consequence. They did not know that *any* amount of money, however small, was of consequence to Isaac.

'I'll tell you what,' cried Herbert; 'if you will wait until to-morrow, Angela and I will go down with you.—Mrs Glubbs will come in and look after aunt, Angela.'

Isaac hailed the proposition with joy; for he had already grown to have great confidence in Herbert and his knowledge of the world—indeed he considered it but little inferior to his own—and he thought that if there were much wrong down at Dambourne, their united experience and sagacity would in all probability speedily set it right.

'And now, old fellow, I want a chat with you for an hour, if you can spare the time,' said Herbert; and as Angela at that moment left the room, he continued: 'I want to speak to you on the subject we were discussing last evening. Have you thought over what I said?'

'Yes,' Isaac answered; 'but not much, for this other affair has put it out of my head for the time.'

'Oh, never mind this little affair,' returned Herbert; 'it is not worth troubling about. Anybody would think you were not worth forty pence to hear how you talk. And that brings me to the subject I want to speak to you about. Angela has an objection to live at your little country place, though not so great an objection as I have to her doing so. And there is no need for you to drone your lives away down there; come up to London and enjoy yourselves. You say you have about two hundred and fifty a year. Well, my sister on her marriage will come into three hundred and fifty a year or thereabouts; and she will probably have a little more whenever anything happens to aunt. The former income she inherits from mother's family, and it is to accumulate until she is married, or if single, until she reaches the age

of thirty-five—now twelve years off. Until one or other of these events happen she cannot touch a penny of it. This puts her in a very peculiar and uncomfortable position; because though father left us enough to live upon, yet it is nothing more, and so whatever preparations you make for your wedding, you must make on trust of what I tell you.'

'O yes,' said Isaac; 'pray do not think—either of you—that I have not confidence in you.'

'That is very kind and generous of you,' Herbert replied, 'because we shall be compelled, under the circumstances I have told you, to test that confidence. Now what we propose is this,' he continued: 'Angela seems to have a great desire to live in the neighbourhood of London, and if you will find a suitable house and furnish it, and have it ready in three months from this time, she will be ready by then to be married. But it has occurred to us that as you are not very well acquainted with London, it may save you some trouble and expense (supposing you agree to our proposition) if you like to leave it to us to fix on the locality and find a house; more especially as I have many friends in different parts of London. But if you prefer to act on your own account, pray do not hesitate to say so.'

Isaac sat and weighed the matter in his mind. Certainly Angela's income was considerably more than he had any idea of, so he need not be so very pinching. On the other hand, he did not much relish the idea of a lavish expenditure over a house and furniture. And yet if Angela would not live at Dambourne End, it did not matter where they lived, so far as he was concerned. And again there rose up the three hundred and fifty a year, and more expectations! Much better than he had expected to do in any matrimonial speculation he had ever contemplated. In addition to these reasons he was by no means obstinate in disposition, and yielded easily to any one in whom he had confidence, and who, as the term goes, 'got the right side of him.' Angela and her brother had contrived to do this. So after a few minutes' thought, Isaac agreed to Herbert's proposal, with one amendment: that if the house were ready in time, the marriage should take place in two months instead of three.

'And,' said Isaac, when this was agreed to, 'on condition that you make all the necessary preparations for me.'

'Yes, if you really wish it,' said Herbert. 'But excuse me speaking plainly: you must advance me the money if I do.'

'Yes, I suppose I must,' Isaac answered ruefully. 'How much do you think you will want, and when will you want it?'

'I should think five hundred pounds would do, at all events for the present. Of course I will be as careful with it as I can, for your interests and Angela's are identical; but you may as well have things good at first, since they are the more economical in the long-run. The money you can let me have whenever it is convenient to you.'

'You shall have the sum you mention in about three weeks,' said Isaac.

Angela now came in dressed for a walk, so Herbert and Isaac broke up their conference, and the three went out together.

IMPORTED BEEF AND MUTTON.

A RESOLUTE attempt was made a dozen years ago to import fresh beef in various forms from Buenos Ayres; and as the meat was sold at a comparatively low price, there arose high expectations on the subject. The well-meant attempt failed. It would not do. The meat presented an unpleasant appearance. The working classes in this country did not like the flavour, even if the appearance had been good; they would not buy, although the price was low; and thus the affair died out after a few months.

Soon after the failure of Buenos Ayres, our own Australian colony of New South Wales made a bid for the favour of English beef-eaters. Mr Mort, an enterprising citizen of Sydney, introduced Nicolle's freezing process for preserving fresh meat in an untainted state. He was sanguine that the same ship might convey beef and mutton from Australia to England and emigrants from England to Australia, thereby conferring a double benefit on the colonies. Queensland and Victoria were also on the *qui vive*, ready to find a market for their surplus live-stock in the old mother-country, if events presented favourable symptoms. The freezing process was not by any means the only one tried in Australia. One was an adaptation of Appert's plan of putting fresh meat into tins and drawing out all the air; a second was to exclude warmth by packing in ice; a third was to exclude moisture in such way as to pack the meat in as dry a state as possible. A large trade was gradually formed by a Sydney Company for preserving meat for the English market—not fresh joints in bulk, but partly cooked in tins. The oxen and sheep were slaughtered in abattoirs of improved construction, skinned, boned, and cut up on large tables; the meat was scalded by steam in large open trays, put into tins, and the tins exposed to a temperature of 230° F., in a bath containing chloride of lime dissolved in the water; then sealed up, exposed to a second bath somewhat hotter, and finally to a cold bath. Not only was steamed or parboiled beef and mutton prepared in this way, but the establishment also sent out tins of roasted, cured, spiced beef, haricot of mutton, and so forth. We cannot go into particulars, and have only to say that the efforts, however meritorious, have not been a commercial success.

It may be stated as a well-known fact that the people of Great Britain will not, as a general rule, buy inferior kinds of butcher-meat. They are all glad to purchase at a low price, but the quality must be good, the look of the meat good, the smell good. We should confidently say that no people on the face of the earth are such connoisseurs in good beef and mutton as the English, down even to the humblest classes. In point of fact, the working classes, as they are called, are more fastidious as regards quality and superior cuts than persons of distinction. Laying down this as a rule, it is throwing away trouble and capital to try to serve the English with anything short of the best fresh meat, as usually obtained from butchers. Frozen meat will not do, for it will not keep. Tinned meat half-cooked, and however well spiced, is also not the thing. One may regret the prejudices often entertained on this score. But for the sake of all parties it is best to acknowledge the fact.

The only expedient likely to be successful is that of importing fresh meat from the United States, owing to the comparatively short duration of the voyage and the several fleets of fine steamers belonging to capitalists, who are never slack in throwing themselves into any trade that promises to be fairly remunerating. The proceedings, in brief, are managed as follows. Live-stock, brought to New York by rail from the central and western states of America, are conveyed to well-arranged abattoirs, where they are quickly slaughtered, skinned, &c. Several hundred carcasses are put at once into a large cool chamber, where they are kept for a day or two—the period depending on the state of the weather. They are then quartered, wrapped up in coarse canvas, and conveyed to the steamer, drawn up alongside a quay or wharf. A compartment is set aside for the reception of the meat, with an ice-chamber at one end. A current of fresh air, filtered through cotton-wool, is driven over the ice by a steam-worked fan or blast, and thence over the masses of meat. About forty tons of ice are shipped for keeping cool the carcasses of a hundred and fifty cattle: reduced probably to a third or quarter of this amount by melting during the voyage. According to the quantity of fresh air forced through the ice-chamber, so is the degree of temperature produced. After many experiments, an opinion has been arrived at that a freezing temperature is neither necessary nor desirable; four or five degrees above that point are preferred, the meat arriving in a pure and fresh state at Liverpool. The quantity shipped at once is sometimes very large. The *Wyoming* steamer, for instance, brought over at one time in the middle of

the recent month of February two thousand three hundred quarters of beef and the carcasses of four hundred sheep. In one week a million and a quarter pounds of meat were brought from New York to Liverpool.

Glasgow, as opening direct by the Clyde to the Atlantic, with its fleet of steamers and enterprising traders, bids fair to be a rival to Liverpool in the American meat-traffic. Every week there are paragraphs in the newspapers announcing fresh arrivals. We quote the following as a specimen from the *Scotsman* of March 7: 'The extension of the American meat-trade at all the larger towns in Scotland has been very marked during the past month, and the import has been quite unequal to the demand. The steamers belonging to the Anchor line of weekly mail packets, which have been bringing from eight hundred to a thousand quarters of fresh meat each voyage, have been compelled to increase their cool-meat cell accommodation by fully one-half. The State line of weekly steamers are also being fitted up with the necessary apparatus for this traffic, and the first steamer of that line with fresh meat—six hundred quarters—was reported last night at the Clyde. The Anchor Line mail-steamer *Anchoria* also arrived yesterday. The latter vessel brings the largest cargo of fresh meat yet imported into Scotland, having on board one thousand six hundred quarters beef and two hundred carcasses of sheep. The two consignments (two thousand two hundred quarters) are nearly equal to any previous fortnight's supply. About one-half of this quantity of fresh meat will be sold in Glasgow market, and the other half will be despatched to Edinburgh, Newcastle, Dundee, and other large towns. In Glasgow and Greenock there has been a further extension of shops for the sale of American fresh meat. The Glasgow butchers are now pretty extensive buyers of the imported beef, and they have again had to lower their prices for home-fed meat by 1d. per lb., making a total reduction on roast and steaks of 3d. per lb., and on other sorts of 2d. per lb. The American meat, however, is still from 1d. to 2d. per lb. cheaper than the medium home sorts. During February the American meat imports at Glasgow, which may be considered as the landing-place for Scotland, amounted to the following large aggregates: 4650 quarters fresh beef, 500 sheep, 2440 tierces salted beef, 1830 barrels salted pork, 1037 barrels hams, 700 barrels tongues, 9300 boxes bacon, and 20,500 cases of tinned (preserved) meat. In the previous month (January) the fresh meat imported aggregated 3728 quarters and 620 sheep; while in December the quantity was about one-half that of January. There is nearly as great an advance in

the import of corned meat, bacon, and salted beef and pork. 950 barrels of tallow and 700 barrels of lard were imported last month. Butter and cheese also form an important item in the cargoes from New York; and last month there was an aggregate of 2500 boxes of cheese and 7050 packages of butter brought in six steamers.'

While Glasgow is the source of supply to various places in Scotland, Liverpool sends consignments by railways to London, Birmingham, Manchester, Sheffield, and other large centres of population. Some part of the conveyance is managed by aid of Acklom's patent refrigerating wagons. These vehicles, constructed and fitted to keep always cool in the interior, are drawn up to the ship's side at the docks, laden with meat, horsed through the streets to a railway depôt, placed upon trucks, conveyed to any other station, dismounted from the trucks, and driven to warehouses and storehouses. If there be continuous rail from the quay to the final warehouse, so much the better.

What do the butchers and the public think of this beef and mutton? It is now known that the meat should be cooked and eaten as soon as possible after being landed, else it loses somewhat of its good flavour. The newspapers stated that a consignment of two hundred quarters of beef to Edinburgh became deteriorated towards the last, by remaining too long in shops or stores unprovided with cooling appliances.

A remarkable enterprise has just been commenced in London in connection with this subject. An 'Australian Meat Agency Company' has existed for several years; it imports canistered provisions of all kinds from our antipodean colonies; but as Sydney and Melbourne have not yet surmounted the difficulties of establishing a profitable transmission of fresh joints of meat to England, the Company has laid itself open to the reception of such meat from any country. Underneath the vast Cannon Street terminus of the South-eastern Railway are ranges of brick vaults which the Meat Company has just taken at an annual rental. Fresh air from the river is admitted into a refrigerating chamber, whence, after being cooled down, it passes into other chambers where the meat is placed on broad open shelves; a small steam-engine forces the air over the ice in the refrigerating chambers, and thence into the several meat chambers. A sloping road leads up from the vaulted chambers to the railway level, and there are four landing-stages from the river—thus affording considerable facilities for the

arrival and departure of large consignments of meat. The expectation is that the meat will keep cool and good for several days, instead of being forced occasionally on an unwilling market to avert spoiling; and if this expectation be realised, the same plan may be adopted for poultry, fruit, and dairy produce.

The retailing at present is a puzzle. We are told from time to time that the butchers cry down the American meat in order to keep up the high price of English and Scotch beef and mutton; that they sometimes sell slightly tainted English meat under the name of American, to bring down the fair fame of the latter; and that more frequently they buy the foreign meat and sell it again as English. The butchers deny these allegations, and the public are left to find out the truth for themselves the best way they can. At the Cold Stores, as they are called, of the Meat Agency Company, above described, the price for sides, quarters, and large joints varies from about sixpence-halfpenny to ninepence per pound—small joints being higher per pound than large, and meat for roasting higher than meat for boiling. The demand for the latter being much less than that for the former, a rapid sale for the whole is found to be difficult, unless buyers are tempted by a lower price for round, brisket, and other boiling-pieces. As a small joint of the best roasting beef is tenpence per pound, the reduction below the price for English beef is certainly not considerable, especially as the sellers do not send the meat to the consumers' houses. If the trade establishes itself on a firm footing, there will probably be retail stores in various parts of London (and other large towns) for the sale of American meat; or else the regular butchers will sell American as well as English meat, each at its own proper price. One thing is certain, as already hinted, that unless the Americans send first-rate qualities of meat, they need not send it at all. Another thing they must attend to is, that in cutting up the meat it must be neatly *dressed*. On this score we have heard serious complaints. The quarters of beef are too often not properly trimmed for market, at least not sufficiently so to please English wholesale dealers.

Other nations are striving to ascertain whether they can obtain a share in this new meat-trade. A French Company has built a ship called *La Frigorifique*, to ply between Buenos Ayres and Brest; it contains cool chambers which will keep meat at any desired temperature. The process adopted is that of M. Tellier. Methylic ether, like ammonia, evaporates

rapidly, and absorbs heat from neighbouring bodies in so doing; the vapour passing through tubes in a cylinder cools down the air outside the tubes; the cooled air passes into chambers in the hold, where the meat is either hung up or put on shelves. The methylic ether can be used over and over again with only little waste. The hope of the Company is to be able to stow in the ship the meat of a thousand head of cattle, bring it from Buenos Ayres to Brest in a little over a month, and sell it at about two-thirds the price of French meat. At the time we are writing, the *Frigorifique* is making her first voyage; on the principle that 'the proof of the pudding is in the eating,' we must wait awhile to learn the result.

Some of the Liverpool steamers are, it is reported, being fitted up with refrigerating apparatus for bringing freshly killed meat from Spain. The continental railways are organising a plan to bring meat from Hungary in three days in refrigerating cars, at a freight-charge of a little over a halfpenny per pound, to Ostend or some port whence it could be shipped to England. Moscow is said to be able to buy fairly good beef at fourpence per pound, and is calculating whether London could obtain some of it at about sevenpence.

The new move certainly has some lively elements in it, and we shall watch with some interest its development. As yet, the introduction of huge cargoes of fresh meat has had no sensible effect in lowering the standard market prices. To some extent this may be explained by the suspended importation of live oxen from the continent, on account of the dreaded cattle disease. Unless, however, the importation of fresh meat from America or elsewhere attains a very gigantic scale, we do not anticipate any very marked reduction of prices. From the increasing wealth and population in the British Islands, the demand for meat will long far outrun the means of native supply. The agricultural interest may as yet keep itself tolerably at ease on the subject.

MOUNT PISGAH, LONDON, W.

IT is not much of a mountain, scarcely deserving the name of a hill in fact, but the name will indicate aptly enough the character of the inhabitants; for it is here that many look longingly into the social Promised Land which they cannot enter. Mount Pisgah is the region of struggling gentility; as Saffron Hill is of organ-grinders; as Brixton is of merchants; as Westburnia is of Hebrews and Anglo-Asiatics; as Brook Street is of doctors, and Islington of City clerks. From the centre and axis of the *haut ton*, which ends at Park Lane, respectability radiates in a north-westerly and south-westerly direction; but whereas South Kensington abruptly terminates in Brompton, the region of Hyde Park, properly so called, merges into Bayswater and Westburnia, the outer circle ending in Mount Pisgah. There is a general air of neglect about the neighbourhood, and although the houses are rather pretentious-looking buildings, they are rarely troubled with the hands of the painter or plasterer. Corinthian columns and stuccoed balustrades lose much of their effect when chipped and scribbled over and used as the vehicle for the artistic displays of youth—in chalks. The doorsteps are not always very clean; and in the street, if it is not dusty, it is muddy; and if scraps of paper are not flying about, orange-peel and broken crockery strew your path. But then this is also a great place for the 'slut of a servant,' who is cheap if nothing else; and for the streets, well, the vestry are not likely to be troubled with complaints from such birds of passage as the Pisgans all are—or all hope to be, I should say—for too often, alas, do they find their wings clipped and their stay involuntary. In Mount Pisgah, majors and colonels are as plentiful as blackberries; high-wranglers and ex-Indian judges jostle first classmen and 'late political residents.' Unbeneficed clergymen, who eagerly scan the *Times* advertisements each morning for pupils; unsuccessful doctors and disappointed barristers waiting for the patients and the briefs that are so long in coming; and others who are seeking to eke out a scanty income by that very poor crutch but passable walking-stick, as some one has aptly called literature—all these abound in this neighbourhood. The only prosperous people are the butchers and bakers and other trades-people. They nod familiarly their 'Good morning, Gineral,'

or 'Wet day, Mister,' to the humble officer or tutor who shovels past with the weight of the remembrance of those rapidly increasing bills for inferior joints and alumed bread, which he must meet at the end of the quarter.

The commercial ethics of Mount Pisgah are not altogether peculiar to themselves; but if one rule meets with greater observance than another, it is, that as bills increase quality shall decrease; and after all, as Mr Undercut or Mr Crumpet will tell you, they are often 'took in dreadful.' How eagerly pay-day is looked forward to! the brief interval from the depressing pecuniary cares of their lives that comes to each four times a year. A 'social' then takes place. Ordinarily, old Mangosteen, of the —th Native Infantry, meeting Junglebird, C.S.I., who lived with him in the N.W.P., where they were as brothers, says 'How do?' and passes on. Each knows that the other has but one thought—his embarrassments: they respect one another's misfortunes, and avoid the hollow mockeries to which conversation must necessarily give rise. But towards the end of each quarter all this is changed; there is going to be a little dinner; or 'My womenkind are turning the house inside out for a dance;' or 'The boys are going to row us down to Richmond;' and then Junglebird and Mangosteen kill their tigers over again, and chuckle merrily over that roaring night at the —th mess; and Briefless and Exminus recall the old Combination Room jokes; and if, as they sip their cheap claret, they think with some regret of that mellow ruby nectar that the cellars of St Botolph's used sometimes to produce; they also remember how, when up last autumn for the election of a 'Silverpoker' (as the Esquire Bedel is irreverently called, from his emblem of office), they had found two fellows of their own time martyrs to gout and a nuisance to the whole college—for which that delicious 'old tawny' was doubtless responsible. The ladies in Mount Pisgah take quite a different tone too, at this eventful period. Although at other times not quite so 'solitary' in their habits as their husbands—for women find a comfort in talking over their common troubles—they have long discussions upon the chance of Charley getting a presentation to Christ's Hospital; or of Tommy's cadetship at Wellington; or how Mr Howling Hawley, the great singing-master, held out hopes of dear Amelia's voice being a fortune to her; and yet how dreadful it would be for the poor child to appear before the public; but then you know, my dear, things have altered so much since our time, and now you really find quite respectable people performing in public! But when they give their little dinners and dances and the rest, you shall see how the Pisgan ladies

will rise to the occasion, and you shall not find in Grosvenor Square a more strict observance of the rules of etiquette. And if at times it is a little old-fashioned and somewhat more strict than Society demands in these loose times, it bears the right stamp, and might indeed be profitably imitated in many more pretentious houses.

Of course it is a long time since those Pisgans who have belonged to the Rag or the Oriental, or the Union or Junior, have ceased to be members of those institutions. Some have found that the seven or eight guineas required at the most critical period of the year could be spent to much better purpose; others have felt that the old associations would be too painful. But they have their clubs nevertheless. Within the last ten years clubs have become as plentiful as hotels nearly. And the enterprising City gentleman who fits up a big house with a dining and reading and smoking and morning and billiard room, and advertises the inauguration of the Pantheon Club, 'for the benefit of those gentlemen who are unable to enter the older clubs owing to their overcrowded condition,' requires names for his committee. Military Pisgans are admirably suited for this rôle. What a blessing too, that they have such a place to go to, instead of always pottering about at home, where they would be but too often in the way.

There are more troublesome things than canaries and poodles, novel-reading and invitation cards, to be attended to by the mammas and daughters of Pisan households. Committees of ways and means; arguing with the cook who 'hasn't been accustomed' to some obviously wise little economy; softening the anger of some brow-beating creditor; twisting and turning, and 'managing,' to make old appear like new, are all matters in which the presence of a male creature is worse than useless. So there is a vague sort of tradition that papa goes to his club to write letters, and to be there if anything should turn up. And he sometimes writes a few letters, and reads all the papers, and smokes a good many pipes, and takes a sandwich and moderate tankard of beer for his lunch, and saunters down Regent Street, or drops into the British Museum Reading-room or the National Gallery—or into the India or Colonial Office, to see if 'anything is turning up.' Besides, he will give you the particulars of a review in Hyde Park, or a boat-race on the Thames, or a 'demonstration' at the 'Reformers' Tree,' just as well as the evening papers, for these are all luxuries within his reach. And in the season you will see him on the wrong side of the Row looking

into the Promised Land. Time was perhaps when he too had joined a knot of laughing youths at the Corner, or seated on horseback had tapped his lackered boot with infinite self-satisfaction, or trotted along at the side of some fair creature with whom he would dance an unconscionable number of dances that same evening. He was a sub or an undergraduate at the time, and saw Fortune within his grasp; but he missed his chance, or Fortune was unkind; and gall and vinegar were his portion instead of milk and honey.

Some of the inhabitants of Mount Pisgah are fairly off, and merely live there because they find the place cheap and they are not forced into any fashionable extravagances. But this is not the case with most. Their pleasures are negative—the mere temporary absence of care. The continually recurring question, 'How shall I pay?' or 'What will it cost?' crushes every sense of comfort and ease out of them. For them is none of the happy regularity of well-to-do respectability—the wiping off of unpaid bills as regularly as Mary Jane the housemaid dusts the escritoire with its dainty pieces of Japan-work and ormolu. Not for them the pleasant little morning duties; the list for Mudie's; the tending of the conservatory; the new waltz by Godfrey; the orders for tradesmen and for dinner (the one crumpled rose-leaf perhaps, this); the afternoon shopping or visiting; the drive to Pall Mall, or the Temple, or the City, to bring papa back from his club, or his chambers, or his office; the pretty frequent theatre and concert; the weekly 'at-homes;' the friendly dances, and more elaborate balls, that are of constant occurrence when town is full. Life is very hard and ugly in Mount Pisgah. Captain Burton the great traveller, says in one of his late works that he wonders how any poor man can ever think of living in England, or any rich one out of it. If England, perhaps more so London; and it is only necessary to know a little of Mount Pisgah to learn what a fascination is exercised over some men's minds by this dear foggy, hard and tender, rich and squalid, centre of an Englishman's world, yclept London.

SPRING SHOWERS.

SWEET is the swart earth
After the April rain;
It will give the violets birth,
And quicken the grass in the plain.

The woodlands are dim—with dreams
Of the region they lately have left;
Like Man and his thoughts of Eden—
Of something of which he's bereft.

The stars they have left their veils
On the everlasting hills;
And angels have trodden the dales,
And spirits have touched the rills.

And truths to be seen and heard,
Say Love has made all things his own;
He reigns in the breast of the bird,
And has made the earth's bosom his throne.

The pansies peep by the brook,
And the primrose is pure in the sun;
The world wears a heavenly look,
Man's spirit and Nature are one.

The cottage that glints through the trees,
And the moss-cushioned, lilac-plumed wall,
The woodland, and emerald leas
Are touched with the Spirit of all.

*** END OF THE PROJECT GUTENBERG EBOOK CHAMBERS'S
JOURNAL OF POPULAR LITERATURE, SCIENCE, AND ART, NO. 695

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg™ electronic works to protect the PROJECT GUTENBERG™ concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for an eBook, except by following the terms of the trademark license, including paying royalties for use of the Project Gutenberg trademark. If you do not charge anything for copies of this eBook, complying with the trademark license is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. Project Gutenberg eBooks may be modified and printed and given away—you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE

THE FULL PROJECT GUTENBERG™ LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg electronic works

1.A. By reading or using any part of this Project Gutenberg electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the

collection of Project Gutenberg electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg mission of promoting free access to electronic works by freely sharing Project Gutenberg works in compliance with the terms of this agreement for keeping the Project Gutenberg name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg License must appear prominently whenever any copy of a Project Gutenberg work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg™ License included with

this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg work in a format other than “Plain Vanilla ASCII” or other format used in the official

version posted on the official Project Gutenberg website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, “Information about donations to the Project Gutenberg Literary Archive Foundation.”
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.

- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES

EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a)

distribution of this or any Project Gutenberg work, (b) alteration, modification, or additions or deletions to any Project Gutenberg work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg

Project Gutenberg is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg's goals and ensuring that the Project Gutenberg collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 41 Watchung Plaza #516, Montclair NJ 07042, USA, +1 (862) 621-9288. Email contact

links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate.

Section 5. General Information About Project Gutenberg electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg eBooks with only a loose network of volunteer support.

Project Gutenberg eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility: www.gutenberg.org.

This website includes information about Project Gutenberg, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
