GROOVES ***

HOW DEEP THE GROOVES

By PHILIP JOSE FARMER

Illustrated by ADKINS

Until James Carroad performed his experiment, there was one voice inside of each of us that always told the truth. But after Cervus III, there were suddenly two voices. And only one was the voice of conscience.

[Transcriber's Note: This etext was produced from
Amazing Stories February 1963.

Extensive research did not uncover any evidence that
the U.S. copyright on this publication was renewed.]

Always in control of himself, Doctor James Carroad lowered his voice.

He said, "You will submit to this test. We must impress the Secretary. The fact that we're willing to use our own unborn baby in the experiment will make that impression a deeper one."

Doctor Jane Carroad, his wife, looked up from the chair in which she sat. Her gaze swept over the tall lean figure in the white scientist's uniform and the two rows of resplendent ribbons and medals on his left chest. She glared into the eyes of her husband.

Scornfully, she said, "You did not want this baby. I did, though now I wonder why. Perhaps, because I wanted to be a mother, no matter what the

price. Not to give the State another citizen. But, now we're going to have it, you want to exploit it even before it's born, just as...."

Harshly, he said, "Don't you know what such talk can lead to?"

"Don't worry! I won't tell anyone you didn't desire to add to the State. Nor will I tell anybody how I induced you to have it!"

His face became red, and he said, "You will never again mention that to me! Never again! Understand?"

Jane's neck muscles trembled, but her face was composed. She said, "I'll speak of that, to you, whenever I feel like it. Though, God knows, I'm thoroughly ashamed of it. But I do get a certain sour satisfaction out of knowing that, once in my life, I managed to break down that rigid self-control. I made you act like a normal man, one able to forget himself in his passion for a woman. Doctor Carroad, the great scientist of the State, really forgot himself then."

She gave a short brittle laugh and then settled back in the chair as if she would no longer discuss the matter.

But he would not, could not, let her have the last word. He said, "I only wanted to see how it felt to throw off all restraints. That was all—an experiment. I didn't care for it; it was disgusting. It'll never happen again."

He looked at his wristwatch and said, "Let's go. We must not make the Secretary wait."

She rose slowly, as if the eight months' burden was at last beginning to drain her strength.

"All right. But I'm submitting our baby to this experiment only under protest. If anything happens to it, a potential citizen...."

He spun around. "A written protest?"

"I've already sent it in."

"You little fool! Do you want to wreck everything I've worked for?"

Tears filled her eyes.

"James! Does the possible harm to our baby mean nothing to you? Only the medals, the promotions, the power?"

"Nonsense! There's no danger! If there were, wouldn't I know it? Come along now!"

But she did not follow him through the door. Instead, she stood with her face against the wall, her shoulders shaking.

A moment later, Jason Cramer entered. The young man closed the door behind him and put his arm around her. Without protest, she turned and buried her face in his chest. For a while, she could not talk but could only weep.

Finally, she released herself from his embrace and said, "Why is it, Jason, that every time I need a man to cry against, James is not with me but you are?"

"Because he is the one who makes you cry," he said. "And I love you."

"And James," she said, "loves only himself."

"You didn't give me the proper response, Jane. I said I loved you."

She kissed him, though lightly, and murmured, "I think I love you. But I'm not allowed to. Please forget what I said. I mean it."

She walked away from him. Jason Cramer, after making sure that he had no lipstick on his face or uniform, followed her.

Entering the laboratory, Jane Carroad ignored her husband's glare and sat down in the chair in the middle of the room. Immediately thereafter, the Secretary of Science and two Security bodyguards entered.

The Secretary was a stocky dark man of about fifty. He had very thick black eyebrows that looked like pieces of fur pasted above his eyes. He radiated the assurance that he was master, in control of all in the room. Yet, he did not, as was nervously expected by James Carroad and Jason Cramer, take offense because Jane did not rise from the chair to greet him. He gave her a smile, patted her hand, and said, "Is it true you will bear a male baby?"

"That is what the tests indicate," she said.

"Good. Another valuable citizen. A scientist, perhaps. With its genetic background...."

Annoyed because his wife had occupied the center of the stage for too long, Doctor James Carroad loudly cleared his throat. He said, "Citizens, honored Secretary, I've asked you here for a demonstration because I believe that what I have to show you is of utmost importance to the State's future. I have here the secret of what constitutes a good, or bad, citizen of the State."

He paused for effect, which he was getting, and then continued, "As you know, I—and my associates, of course—have perfected an infallible and swift method whereby an enemy spy or deviationist citizen may be unmasked. This method has been in use for three years. During that time, it has exposed many thousands as espionage agents, as traitors, as potential traitors."

The Secretary looked interested. He also looked at his wristwatch. Doctor Carroad refused to notice; he talked on at the same pace. He could justify any amount of time he took, and he intended to use as much as possible.

"My Department of Electroencephalographic Research first produced the devices delicate enough to detect the so-called rho waves emanated by the human brain. The rho or semantic waves. After ten years of hard work, I correlated the action of the rho waves in a particular human brain with the action of the individual's voice mechanisms. That meant, of course, that we had a device which mankind has long dreamed of. A—pardon the term—mind-reading machine."

Carroad purposely avoided scientific terminology. The Secretary did have a Ph.D. in political science, but he knew very little of any biological science.

Jason Cramer, at a snap of the fingers by Carroad, wheeled a large round shining machine to a spot about two feet in front of Jane. It resembled a weird metallic antelope, for it had a long flexible neck at the end of which was an oval and eyeless head with two prongs like horns. These pointed at Jane's skull. On the side of the machine—Cervus III—was a round glass tube. The oscilloscope.

Carroad said, "We no longer have to attach electrodes to the subject's head. We've made that method obsolete. Cervus' prongs pick up rho waves without direct contact. It is also able to cut out 99.99% of the 'noise' that had hampered us in previous research."

Yes, thought Jane, and why don't you tell them that it was Jason Cramer who made that possible, instead of allowing them to think it was you?

At that moment, she reached the peak of her hate for him. She wished that the swelling sleeper within her was not Carroad's but Cramer's. And, wishing that, she knew that she must be falling in love with Cramer.

Carroad's voice slashed into her thoughts.

"And so, using the detected rho waves, which can be matched against definite objective words, we get a verbal picture of what is going in the subject's mind at the conscious level."

He gave an order to Cramer, and Cramer twisted a dial on the small control board on the side of Cervus.

"The machine is now set for semantic relations," Carroad said.

"Jane!" he added so sharply that she was startled. "Repeat this sentence after me! Silently!"

He then gave her a much-quoted phrase from one of the speeches of the Secretary himself. She repressed her scorn of him because of his flattery and dutifully concentrated on thinking the phrase. At the same time, she was aware that her tongue was moving in a noiseless lock-step with the thoughts.

The round tube on the side of Cervus glowed and then began flashing with many twisting threads of light.

"The trained eye," said Carroad, "can interpret those waveforms. But we have a surprise for you to whom the patterns are meaningless. We have perfected a means whereby a technician with a minimum of training may operate Cervus."

He snapped his fingers. Cramer shot him a look; his face was expressionless, but Jane knew that Cramer resented Carroad's arrogance.

Nevertheless, Cramer obeyed; he adjusted a dial, pushed down on a toggle switch, rotated another dial.

A voice, tonelessly and tinnily mechanical, issued from a loudspeaker beneath the tube. It repeated the phrase that Carroad had given and that Jane was thinking. It continued the repetition until Cramer, at another fingersnap from Carroad, flicked the toggle switch upward.

"As you have just heard," said Carroad triumphantly, "we have converted the waveforms into audible representations of what the subject is thinking."

The Secretary's brows rose like two caterpillars facing each other, and he said, "Very impressive."

But he managed to give the impression that he was thinking, Is that all?

Carroad smiled. He said, "I have much more. Something that, I'm sure, will please you very much. Now, as you know, this machine—my Cervus—is exposing hundreds of deviationists and enemy agents every year.

"Yet, this is *nothing*!"

He stared fiercely at them, but he had a slight smile on the corners of his lips. Jane, knowing him so well, could feel the radiance of his pride at the fact that the Secretary was leaning forward and his mouth was open.

"I say this is nothing! Catching traitors after they have become deviationist is locking the garage after the car has been stolen. What if we had a system of control whereby our citizens would be *unable* to be anything but unquestioningly loyal to the State?"

The Secretary said, "Aah!"

"I knew you would be far from indifferent," said Carroad.

Carroad pointed a finger downwards. Cramer, slowly, his jaws set, twisted the flexible neck of Cervus so that the pronged head pointed directly at Jane's distended stomach. He adjusted controls on the board. Immediately

the oscilloscope danced with many intricate figures that were so different from the previous forms that even the untutored eyes of the Secretary could perceive the change.

"Citizens," said Carroad, "for some time after we'd discovered the rho waves in the adult and infant, we searched for their presence in the brain of the unborn child. We had no success for a long time. But that was not because the rho waves did not exist in the embryo. No, it was because we did not have delicate enough instruments. However, a few weeks ago, we succeeded in building one. I experimented upon my unborn child, and I detected weak traces of the rho waves. Thus, I demonstrated that the ability to form words is present, though in undeveloped form, even in the eight-month embryo.

"You're probably wondering what this means. This knowledge does not enable us to make the infant or the unborn speak any sooner. True. But what it does allow us to do is...."

Jane, who had been getting more tense with every word, became rigid. Would he allow this to be done to his own son, his own flesh and blood? Would he permit his child to become a half-robot, an obedient slave to the State, incapable in certain fields of wielding the power of free will? The factor that most marked men from the beasts and the machine?

Numbly, she knew he would.

"... to probe well-defined areas in the undeveloped mind and there to stamp into it certain inhibitory paths. These inhibitions, preconditioned reflexes, as it were, will not, of course, take effect until the child has learned a language. And developed the concepts of citizen and State.

"But, once that is done, the correlation between the semantic waves and the inhibitions is such that the subject is unable to harbor any doubts about the teachings of the State. Or those who interpret the will of the State for its citizens.

"It is not necessary to perform any direct or physical surgery upon the unborn. The reflexes will be installed by Cervus III within a few minutes. As you see, Cervus cannot only receive; it can also transmit. Place a recording inside that receptacle beneath the 'speaker, actuate it, and, in a short time, you have traced in the grooves of the brain—if you will pardon an unscientific comparison—the voice of the State."

There was a silence. Jane and Cramer were unsuccessful in hiding their repulsion, but the others did not notice them. The Secretary and his bodyguards were staring at Carroad.

After several minutes, the Secretary broke the silence.

"Doctor Carroad, are you sure that this treatment will not harm the creative abilities of the child? After all, we might make a first-class citizen, in the political sense, out of your child. Yet, we might wreck his potentialities as a first-class scientist. If we do that to our children, we lose out in the technological race. Not to mention the military. We need great generals, too."

"Absolutely not!" replied Carroad, so loudly and flatly that the Secretary was taken aback. "My computations, rechecked at least a dozen times, show there is no danger whatsoever. The only part of the brain affected, a very small area, has nothing to do with the creative functions. To convince you, I am going to perform the first operation upon my own son. Surely, I could do nothing more persuasive than that."

"Yes," said the Secretary, stroking his massive chin. "By the way, can this be done also to the adult?"

"Unfortunately, no," said Carroad.

"Then, we will have to wait a number of years to determine if your theory is correct. And, if we go ahead on the assumption that the theory is correct, and treat every unborn child in the country, we will have spent a tremendous amount of money and time. If you are not correct...."

"I can't be wrong!" said Carroad. His face began to flush, and he shook. Then, suddenly, his face was its normal color, and he was smiling.

Always in control, thought Jane. Of himself and, if circumstances would allow, of everybody.

"We don't have to build any extra machines," said Carroad. "A certain amount will be built, anyway, to detect traitors and enemies. These can be used in hospitals, when not in use elsewhere, to condition the unborn. Wait. I will show you how simple, inexpensive, and swift the operation is."

He gestured to Cramer. Cramer, the muscles twitching at the corners of his mouth, looked at Jane. His eyes tried desperately to tell her that he had to obey Carroad's orders. But, if he did, would he be understood, would he be forgiven?

Jane could only sit in the chair with a face as smooth and unmoving as a robot's and allow him to decide for himself without one sign of dissent or consent from her. What, after all, could either do unless they wished to die?

Cramer adjusted the controls.

Even though Jane knew she would feel nothing, she trembled as if a fist were poised to strike.

Bright peaks and valleys danced on the face of the oscilloscope. Carroad, watching them, gave orders to Cramer to move the prongs in minute spirals. When he had located the area he wished, he told Cramer to stop.

"We have just located the exact chain of neurones which are to be altered. You will hear nothing from the speaker because the embryo, of course, has no language. However, to show you some slight portion of Cervus' capabilities, Cramer will stimulate the area responsible for the rho waves before we begin the so-called inhibiting. Watch the 'scope. You'll see the waves go from a regular pulse into a wild dance."

The cyclopean eye of the oscilloscope became a field of crazed lines, leaping like a horde of barefooted and wire-thin fakirs on a bed of hot coals.

And a voice boomed out, *"Nu'sey! Nu'sey! Wanna d'ink!"*

Jane cried out, "God, what was that?"

The Secretary was startled; Cramer's face paled; Carroad was frozen.

But he recovered quickly, and he spoke sharply. "Cramer, you must have shifted the prongs so they picked up Jane's thoughts."

"I—I never touched them."

"Those were not my thoughts," said Jane.

"Something's wrong," said Carroad, needlessly. "Here. I'll do the adjusting."

He bent the prongs a fraction, checked the controls, and then turned the power on again.

The mechanical voice of Cervus spoke again.

"What do you mean? What're you saying? My father is not crazy! He's a great scientist, a hero of the State. What do you mean? Not any more?"

The Secretary leaped up from the chair and shouted above Cervus' voice, "What is this?"

Carroad turned the machine off and said, "I—I don't know."

Jane had never seen him so shaken.

"Well, find out! That's your business!"

Carroad's hand shook; one eye began to twitch. But he bent again to the adjustment of the dials. He directed the exceedingly narrow beam along the area from which the semantic waves originated. Only a high-pitched gabble emerged from the speaker, for Carroad had increased the speed. It was as if he were afraid to hear the normal rate of speech.

Jane's eyes began to widen. A thought was dawning palely, but horribly, on the horizon of her mind. If, by some intuition, she was just beginning to see the truth.... But no, that could not be.

But, as Carroad worked, as the beam moved, as the power was raised or lowered, so did the voice, though always the same in tone and speed, change in phrase. Carroad had slowed the speed of detection, and individual words could be heard. And it was obvious that the age level of the speaker was fluctuating. Yet, throughout the swiftly leaping sentences, there was a sameness, an identity of personality. Sometimes, it was a baby just learning the language. At other times, it was an adolescent or young boy.

"Well, man, what is it?" bellowed the Secretary.

The mysterious voice had struck sparks off even his iron nerves.

Jane answered for her husband.

"I'll tell you what it is. It's the voice of my unborn son."

"Jane, you're insane!" said Carroad.

"No, I'm not, though I wish I were."

"God, he's at the window!" boomed the voice. "And he has a knife! What can I do? What can I do?"

"Turn that off until I get through talking," said Jane. "Then, you can listen again and see if what I'm saying isn't true."

Carroad stood like a statue, his hand extended towards the toggle switch but not reaching it. Cramer reached past him and flicked the switch.

"James," she said, speaking slowly and with difficulty. "You want to make robots out of everyone. Except, of course, yourself and the State's leaders. But what if I told you that you don't have to do that? That Nature or God or whatever you care to call the Creator, has anticipated you? And done so by several billion years?

"No, don't look at me that way. You'll see what I mean. Now, look. The only one whose thoughts you could possibly have tapped is our son. Yet, it's impossible for an unborn baby to have a knowledge of speech. Nevertheless, you heard thoughts, originated by a boy, seeming to run from the first years of speech up to those of an adolescent. You have to admit that, even if you don't know what it means.

"Well, I do."

Tears running down her cheeks, choking, she said, "Maybe I see the truth where you don't because I'm closer to my baby. It's part of me. Oh, I know you'll say I'm talking like a silly woman. Maybe. Anyway, I think that what we've heard means that we—all of humanity without exception—are machines. Not steel and electrical robots, no, but still machines of flesh, engines whose behavior, motives, and very thoughts, conscious or unconscious, spring from the playing of protein tapes in our brains."

"What the hell are you talking about?" said Carroad.

"If I'm right, we are in hell," she said. "Through no fault or choice of ours. Listen to me before you shut your ears because you don't want to hear, can't hear."

"Memories are not recordings of what has happened in our past. Nor do we act as we will. We speak and behave according to our 'memories,' which are not recorded *after* the fact. They're recorded *before* the fact. Our actions are such because our memories tell us to do such. Each of us is set like a clockwork doll. Oh, not independently, but intermeshed, working together, synchronized as a masterclock or masterplan decrees.

"And, all this time, we think we are creatures of free will and chance. But we do not know there isn't such a thing as chance, that all is plotted and foretold, and we are sliding over the world, through time, in predetermined grooves. We, body and mind, are walking recordings. Deep within our cells, a molecular needle follows the grooves, and we follow the needle.

"Somehow, this experiment has ripped the cover from the machine, showed us the tape, stimulated it into working long before it was supposed to."

Suddenly, she began laughing. And, between laughing and gasping, she said, "What am I saying? It can't be an accident. If we have discovered that we're puppets, it's because we're supposed to do so."

"Jane, Jane!" said Carroad. "You're wild, wild! Foolish woman's intuition! You're supposed to be a scientist! Stop talking! Control yourself!"

The Secretary bellowed for silence, and, after a minute, succeeded. He said, "Mrs. Carroad, please continue. We'll get to the bottom of this."

He, too, was pale and wide-eyed. But he had not gotten to his position by refusing to attack.

She ordered Cramer to run the beam again over the previous areas. He was to speed up the process and slow down only when she so directed.

The result was a stream of unintelligibilities. Occasionally, when Cramer slowed Cervus at a gesture from Jane, it broke into a rate of speech they could understand. And, when it did, they trembled. They could not deny that they were speeding over the life thoughts of a growing male named James Carroad, Junior. Even at the velocity at which they traveled and the great jumps in time that the machine had to make in order to cover the track quickly, they could tell that.

After an hour, Jane had Cramer cut off the voice. In the silence, looking at the white and sweating men, she said, "We are getting close to the end? Should we go on?"

Hoarsely, the Secretary shouted, "This is a hoax! I can prove it must be! It's impossible! If we carry the seeds of predeterminism within us, and yet, as now, we discover how to foresee what we shall do, why can't we change the future?"

"I don't know, Mr. Secretary," said Jane. "We'll find out—in time. I can tell you this. If anyone is preset to foretell the future, he'll do so. If no one is, then the problem will go begging. It all depends on Whoever wound us up."

"That's blasphemy!" howled the Secretary, a man noted for his belligerent atheism. But he did not order the voice to stop after Jane told Cramer to start the machine up again.

Cramer ran Cervus at full speed. The words became a staccato of incomprehensibility; the oscilloscope, an almost solid blur. Flickers of blackness told of broad jumps forward, and then the wild intertwined lightning resumed.

Suddenly, the oscilloscope went blank, and the voice was silent.

Jane Carroad said, "Backtrack a little, Jason. And then run it forward at normal speed."

James Carroad had been standing before her, rigid, a figure seemingly made of white metal, his face almost as white as his uniform. Abruptly, he broke into fluidity and lurched out of the laboratory. His motions were broken; his shouts, broken also.

"Won't stay to listen ... rot ... mysticism ... believe this ... go insane! Mean ... no control ... no control...."

And his voice was lost as the door closed behind him.

Jane said, "I don't want to hear this, Jason. But...."

Instantly, the voice boomed, *"God, he's at the window! And he has a knife! What can I do? What can I do? Father, father, I'm your son! He knows it, he knows it, yet he's going to kill me. The window! He's breaking it! Oh, Lord, he's been locked up for nineteen years, ever since he shot and killed my mother and all those men and I was born a Caesarean and I didn't know he'd*

escape and still want to kill me, though they told me that's all he talked about, raving mad, and...."

THE END

*** END OF THE PROJECT GUTENBERG EBOOK HOW DEEP THE
GROOVES ***

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from print editions not protected by U.S. copyright law means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg™ electronic works to protect the PROJECT GUTENBERG™ concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for an eBook, except by following the terms of the trademark license, including paying royalties for use of the Project Gutenberg trademark. If you do not charge anything for copies of this eBook, complying with the trademark license is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. Project Gutenberg eBooks may be modified and printed and given away—you may do practically ANYTHING in the United States with eBooks not protected by U.S. copyright law. Redistribution is subject to the trademark license, especially commercial redistribution.

START: FULL LICENSE

THE FULL PROJECT GUTENBERG™ LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg electronic works

1.A. By reading or using any part of this Project Gutenberg electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the collection of Project Gutenberg electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are

located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg mission of promoting free access to electronic works by freely sharing Project Gutenberg works in compliance with the terms of this agreement for keeping the Project Gutenberg name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg License must appear prominently whenever any copy of a Project Gutenberg work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project GutenbergTM License included with this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg work in a format other than “Plain Vanilla ASCII” or other format used in the official version posted on the official Project Gutenberg website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project

Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to

you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg work, (b) alteration, modification, or additions or deletions to any Project Gutenberg work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg

Project Gutenberg is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the

efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg's goals and ensuring that the Project Gutenberg collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 41 Watchung Plaza #516, Montclair NJ 07042, USA, +1 (862) 621-9288. Email contact links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment

including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate.

Section 5. General Information About Project Gutenberg electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg eBooks with only a loose network of volunteer support.

Project Gutenberg eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a

copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility:
www.gutenberg.org.

This website includes information about Project Gutenberg, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
