Blind Play

By CHAN DAVIS

*Nick Pappas, hired-killer from Callisto, was
strictly out for Pappas—out for Number One, as
they used to say. And now those fools in the
vanishing spaceship thought that number was up!*

**[Transcriber's Note: This etext was produced from
Planet Stories May 1951.**

**Extensive research did not uncover any evidence that
the U.S. copyright on this publication was renewed.]**

Nick Pappas had just crossed to the instrument panel of the *Tang Chuh-Chih's* lifeboat when he heard a sound behind him. He turned quickly.

He had left the airlock between the lifeboat and the ship open. That had been stupid, he realized, but it was too late to correct it now. One of the *Tang's* two other crew members was approaching down the corridor just beyond the airlock; if he saw the doors slide shut now he'd be immediately suspicious. That would leave Pappas inside the lifeboat, and before he could drain enough fuel from the ship's tanks into the lifeboat's, the other two could have the airlock cut open.

He still had a chance to hide—but before he could propel himself to the other end of the lifeboat, out of sight, Arne Birkerod appeared at the other side of the open airlock.

Birkerod smiled. Pappas stood still, gripping the pilot's seat in front of him.

"Hello, Arne," said Pappas. "I was just checking over the—"

"Good morning, Nick—or good evening, if you like. Let's go up to the control cabin and see Garcia."

For a very brief moment, Pappas considered. Although the *Tang* was in free fall, he was very conscious of the weight of the gun concealed inside his jacket. He might use it now, but the sound would bring Garcia. Better to bluff it through. The other two might not be suspicious yet, and in a pinch he had the advantage that they weren't armed. "Sure," he said, and pushed himself across to where Birkerod stood.

"After you," said Birkerod, much more politely than usual.

Pappas smiled uncertainly. He planted both feet against the side of the airlock opening, then jumped off. He floated down the ship's corridor to where it took a sharp bend; there he grabbed a rung of a ladder bolted to the corridor wall.

Birkerod had pushed off harder than Pappas had; he arrived at the ladder at the same time. "After you," he said again.

Pappas saw, at the end of the long corridor ahead, the open door to the control cabin. He pushed off in that direction.

Yusuf Garcia was in the ship's pilot's seat. Garcia was half Brazilian and half Malagasy. His eyes had a strong green tint which looked strange against the deep brown-black of his face. Pappas had always been a little afraid of him and the present situation didn't help that any; there was a gun in Garcia's hand.

Birkerod followed Pappas in, taking a seat facing Garcia. "What did you find, Yusuf?" he asked casually.

"Well, Arne, I haven't finished checking up on our little conjecture; the calculator over there is still working on it. But while I was waiting I looked through our friend Pappas's locker. You may already have noticed what I found." He waved the gun. "Where did you find our friend, by the way?"

Birkerod smiled. "First place I looked."

"The lifeboat?"

"Yeah."

"What was he doing?"

"Nothing. I think I know how our little conjecture's going to turn out, though." He turned to Pappas, who had followed the exchange tensely. "You know, Nick, my father was a fellow-countryman of yours back on Earth."

"Countryman?"

"That's right. He lived just north of Winnipeg. My mother was a Canadian, too. Both of them were in the second batch of colonists that left for Callisto. But it doesn't mean much to call you a Canadian any more, does it? Garcia and you and I, we're all Callistans now."

"Sure," said Pappas, wondering.

Callisto: A cold world. A small new world, and a cold world, and incredibly distant from the planet that had evolved its settlers.

In the thirty years since the exploration of Jupiter's satellites had begun, Callisto had had a very different history from the rest. On Ganymede, a hundred or so engineers had been working all that time on the tremendous task of raising the satellite's mean temperature to the point where an atmosphere could be provided and open-air cities and farms built in which Earthmen could live. The smaller satellites had been largely ignored. But it had been found that Callisto had large deposits of ore of such quality that, in spite of the tremendously long haul required to carry anything from there to the inner planets, it was worth while beginning mining operations. Up went the insulated, airtight domes, out came the colonists, down went the mine shafts.

It was a hard life. Crystalline rock was cut by machines at the mine-faces, and by the time other machines had brought it up the shafts to the surface-level in the domes, it had become amorphous and powdery, its crystalline structure destroyed by being heated to twenty degrees below zero Centigrade. When you repaired machinery below the surface, you wore sixty kilograms of spacesuit (Earth weight), and a failure of any item of equipment or a fumble by any member of your crew might mean sudden death. The walls of the dome shut you in from the sky, for the vacuum out there was death too; when you did get up to the observatory to see the sky, you saw Jupiter, weirdly streaked with brilliant color—if your dome was on the side of Callisto toward Jupiter. Otherwise, you looked across twenty million kilometers of vacuum to the nearest star.

It was a hard life, and no life for a lone wolf. There were no homestead farms to be settled by lonely pioneer families. Callisto was a sterile place, and to keep life going there at all men had to work together. Cooperation was a lesson Earth civilization had learned only after thousands of years of oppression and war; a lesson that had to be learned before men could cross space; and a lesson that was very difficult to forget on Callisto. At least for most people.

Rita and Cliff Belden had control of the trade between Callisto and the inner planets. It didn't start as control, though; the way it began was this: Once the colony had been well established, its operation was left

completely up to the Callistans, who shipped as much of their goods to Earth as they could manage, and requisitioned as much food and supplies from Earth as they needed—which was really the best way. The inner planets could not very well take part in the planning of Callisto's activities, since there was no radio contact and the trip took over two months by freighter even when the relative positions of the planets in their orbits was most favorable. One freighter shuttled back and forth between No. 2 Dome on Callisto at one end and any of several inner-planet ports at the other. Rita and Cliff Belden were the two Callistans whose job it was to run that freighter.

The little colony was absolutely dependent on the supplies they brought. This fact was obvious to everybody, but the Beldens made a deduction from it which was unprecedented on Callisto: they could threaten to withhold the supplies and thereby force the rest of the colonists to agree to whatever they asked—provided they could make the threat stick. They made the attempt. On one of their trips back from Earth, they put the ship into an orbit around Callisto instead of landing, and announced they would not land until their henchmen on Callisto were in control.

And the henchmen did a thorough job of taking control. All the details were taken care of: They quickly seized the radio transmitters that maintained contact with Ganymede, they confiscated all the reserves of spaceship fuel they could find, they clamped down as tightly as they could on communication between the domes; then they started keeping a close check on every tool that could be used as a weapon. There was just one place they slipped up. Their search for fuel wasn't good enough.

The people of No. 4 Dome pooled the fuel they had hidden from the Beldens; they seized from the Beldens' guards the Dome's tiny spaceship, which had been assembled on Callisto and which had never been intended to leave the Jupiter system; and they sent the ship off for Venus, with Garcia and Birkerod aboard. Venus was the only possible destination, with the planets' positions in their orbits as they were then: to reach Earth or Mars would have taken either more fuel than they had, or much more time than they could spare.

As it was, the trip took eight months.

On Venus there was no hitch. Garcia and Birkerod went to the Liaison Office in Kreingrad, as planned, and were provided with the *Tang Chuh-Chih*, with a load of supplies—and with Nick Pappas, a former Callistan who wanted to return there. They followed the Liaison Office's suggestion and took Pappas aboard.

"We're all Callistans now," Birkerod repeated. "I wonder, Nick. How did you happen to leave Callisto in the first place? Just felt like visiting good old Saskatchewan? I doubt it. Let's see—you left before that business started with the Beldens, didn't you?"

Pappas licked his lips nervously. Garcia answered for him: "Yes, about ten months before, according to what they told us on Venus."

"Yeah," Birkerod mused. "You know the Beldens, of course."

"Yes," said Pappas, "of course. I came to Earth on their freighter."

"Not *their* freighter," Garcia put in. "Callisto's freighter, which they were operating. It's only more recently that it's become *their* freighter."

Birkerod smiled and went on, "It's interesting, Mr. Pappas, that you left Callisto about the time the Beldens' plans must have been taking shape. I wonder why you did?"

Pappas ignored the question. A moment before, the red signal light had flashed on above the calculator set in the opposite bulkhead. The computations had been finished on Garcia and Birkerod's "little conjecture."

Garcia, who was closest to the machine, filled in the silence. "Let's find out what the calculator has to say. It may clear things up a little."

There was a row of spring-clamps set in the bulkhead next to him for holding objects stationary while the ship was in free fall. Garcia put his gun in one of these, slipped out of the "safety belt" that had held him in the pilot's seat in spite of the lack of gravity, and turned to the calculator.

Pappas sprang. Not toward Garcia—but toward the side of the cabin that would have been the ceiling if there had been an "up." He snatched his gun

from his jacket.

Something crashed into Pappas, spun him around. Birkerod had jumped too, hitting him hard in midair.

The cabin whirled about them. He felt Birkerod's powerful grip around the hand which held the gun. Simultaneously they reached the ceiling; Pappas's head hit metal with a crack. The gun fell free. Weightless, the two of them wrestled desperately.

The cabin whirled around them ... the gun fell free....

Suddenly Birkerod pulled loose and jumped away. Pappas found himself alone in the middle of the cabin, drifting slowly from the pilot's seat.

In the pilot's seat Garcia was again sitting calmly, his gun leveled. Birkerod had the other gun. There was silence while Pappas reached the bulkhead, pushed back to his seat, and belted himself in.

Garcia said, "Suppose I try answering some of these questions. When Arne and I left Callisto, the Beldens learned our orbit and high-tailed in to the inner planets. With plenty of fuel, they arrived before us, and got you, their agent, on the job. You got yourself included in our return trip on the *Tang*. Then you calculated an orbit for us that would run us smack into Earth at a relative velocity of thirty-odd kilometers a second!

"The next thing was to divert the fuel from the *Tang's* tanks to the lifeboat's, and take off yourself in the lifeboat. That would have left us in a collision orbit, with no fuel to pull ourselves out of it.

"Not such a good plan, Nick. You should have planned just to kill us both as soon as the *Tang* was in space; you'd have had a better chance that way. Your overeagerness to compute our orbit just didn't look natural."

"No, listen," Pappas protested feebly. "I didn't calculate a collision orbit. I —"

"Sorry," said Garcia. "That's what the machine just finished checking for us. The orbit we're on meets Earth dead center, and it wouldn't take us to Callisto even if Earth wasn't there. Arne—*what'll we do with this character?*"

Birkerod smiled. "I like the suggestion you made when we discussed it before."

"I was just joking!"

"No, I think it's the best idea." He turned to Pappas, who flinched in spite of himself. "Look, Nick, the Beldens have no chance of winning on Callisto.

No chance. Men had to learn to cooperate before they could get to the planets at all, and by this time they've learned good and thoroughly. The individual who's out for himself is an anachronism. You and the Beldens—a hundred years ago you'd have felt right at home. Then everybody was 'out for a fast buck,' as they used to say. In this century everybody works together, and darn near everybody likes it that way.

"But, Nick, the Beldens are still dangerous. They can't win; but they can hold up the development of Callisto for years, and make the Callistans plenty miserable in the process. The inner planets won't interfere. Their policy for years has been this: Callisto is so far away that it's their concern how they run things; we'll send them supplies, they'll send us minerals, and that's that.

"So the people of Callisto have got to lick the Beldens. This ship is absolutely essential, because it's the means of breaking the Beldens' monopoly. We have to get to Callisto, and when we get there we'll be in the middle of a pretty critical situation; the *Tang* will be just as essential to the Beldens as to us, for the opposite reason."

"Therefore," Garcia put in, "we can't afford to have you around."

"What are you going to do?" Pappas murmured.

"To you?" said Birkerod. "Well, we can't take you with us; we don't want to kill you if we can help it; we can't turn you loose in the lifeboat, even if we keep most of the fuel, because we may need the lifeboat on Callisto. There's one thing left.

"If it's all right with Yusuf, we're going to put you altogether, completely on your own. You're not going to be working for anybody else, not even for stinkers like the Beldens. You're going to be all by yourself, and you're going to have to do a good job of looking out for yourself. Not for anyone else, just for Nick Pappas—'Number One,' as people used to say. We're not going to give you a word of advice, either. If we did, you wouldn't be independent enough. How does it sound, Yusuf? Appropriate?"

Garcia smiled. "Sounds about right, Arne. Maybe I'm too angry at the Beldens to think straight, but it sounds like a pretty appropriate way to handle Mr. Pappas. He'll be all on his own, and if he doesn't work things out

just right—he'll get the most spectacular finish any individualist could ask for!"

Nick Pappas hung weightless in interplanetary space.

Ten meters away floated the *Tang Chuh-Chih*. One side of it glared white in the sunlight, the other side was jet black, visible only as a shadow across the stars. It floated there motionless, very close to him, but he knew he didn't dare to try to reach it, because it was going to start accelerating any second.

The faceplate of Pappas's spacesuit fogged slightly; he moved a hand inside the suit, adjusted the humidity control. When the faceplate had cleared, he saw that the *Tang's* rockets were already firing.

The ship still floated there, within shouting distance if there had been an atmosphere; but now from its jets there extended long, perfectly straight streaks of shimmering blue-violet. It seemed to Pappas as though he was drifting slowly parallel to the ship, in the direction of the jets. He shook his head to get rid of the illusion. He was remaining perfectly still, the ship's hull was sliding past him. When the jets were abreast of him, they cut off. He watched the ship receding, rapidly now. A minute or so later there were two short blasts on the steering jets; Pappas realized they were swinging the ship around so he wouldn't be caught in the rocket blast. Then the main jets started up again.

Pappas followed the ship with his eyes as long as he could distinguish it—which wasn't long. Then, he was *alone*.

Not only were there no walls around him, there wasn't even anything under his feet. There was nothing, anywhere.

"So this was what all that talk added up to," Pappas thought. "They simply set me out here in the middle of the vacuum to stay until the suit's food and air give out."

He thought he might as well make himself at home. He checked over the suit. It was nicely equipped. In addition to standard items, there were

several things strapped onto the back of the suit on the outside which pleased him until he realized how little difference they made: There was a reel of light, strong cable with magnetic grapples which could be clamped onto it. There was a hand reaction motor the size of a Stillson wrench, and ten containers of fuel, each the size of a fountain pen. There was a large mirror, for signaling. Also for the same purpose, there was a powerful, highly directional searchlight. He checked the cells which powered it; they were low, but he knew they were charging at that moment from the sunlight falling on them. The searchlight would work. For what that was worth.

So much for his suit. Next, where was he? His position couldn't be given in latitude and longitude, because there wasn't anything for it to be latitude and longitude *on*. He was somewhere between the orbits of Venus and Earth. The direction of the Sun he could tell by glancing at the arm of his spacesuit and seeing where the sunlight fell—the Sun was behind him and to the right, and a little "downward."

As for the Earth, that would be the next brightest body in his sky. He craned his head in all directions, searching. Then he took out the hand reaction motor and gave a blast to start himself spinning, so he could search in the directions he hadn't been able to see in before. Even the short blast he used made the motor tug at his hand and started the universe whirling around him frighteningly. He turned the control on the motor down as low as it would go, then pressed the button several more times. Finally he had canceled out most of his rotation, and the Milky Way was wheeling calmly about him. He got himself oriented again and after a short time had identified Earth, which was close enough to appear as a blue-green disk.

Earth! A thought suddenly struck him. The *Tang* had been heading straight for Earth when it had let him off; he was still going exactly in the *Tang's* former orbit. He would reach Earth! There was one more thing he should check—yes, he had a parachute. It was on the back of his spacesuit, underneath the gear he'd investigated before. Now if he could land safely he was all set! Birkerod and Garcia must not have thought of this.

One thing still bothered him: He had been headed for Earth when he was put off the *Tang*, but had anything happened since to put him off course? How about those times he'd used the reaction motor to set himself spinning? Well, the several small blasts would probably not have had any net effect on his direction of motion, and if they had there wasn't anything to be done about it. But the single strong blast at the beginning—he could remember which constellation he'd been facing at the time, where he'd held the reaction motor, and how strong a blast he'd given. That meant he could give an approximately equal blast now in the opposite direction. This he did, being careful to aim directly away from his center of gravity, so as not to start spinning again.

Now he should be back on course, he figured. Assuming, that is, that he'd ever been off. The small thrust of his reaction motor, applied for such a short time, might not be enough to make any appreciable difference as to where he ended up. He didn't bother trying to calculate it.

Nothing to do now but wait. He spent the time thinking about what he'd do when he got to Earth. It was hard to figure. He'd had a racket on Earth for the year-and-a-half after the Beldens brought him there; everyone had assumed he was doing something important to Callisto's welfare, and all he'd had to do was go through the motions. Now, he didn't know. It was probably true that the Beldens were through; with the *Tang Chuh-Chih* arriving on Callisto, the odds were against them.

He'd have to find something else, Pappas decided. This whole Belden business was pretty provincial, anyway. And as for Birkerod, Garcia, and those people—! Pappas dismissed Callisto from his thoughts completely. There would have to be some angle on the inner planets.

After several hours of thought on the subject, he took stock of his situation again. The disk of Earth was a little larger, he thought, but not enough so you'd notice it. He pulled the semi-opaque visor over his faceplate and went to sleep.

He slept for ten days.

Not Earth days, however. When Pappas went to sleep the Sun was behind him. He thought he had eliminated his rotation, but actually he was tumbling head over heels, extremely slowly. Thus, for him, the Sun rose between his feet and set directly "above" him.

The eleventh of these "sunrises" woke him. He stayed awake, because as soon as he flipped his visor up and looked around him the Earth caught his eye. It was much closer. He did not know how to measure its angular diameter, so he couldn't calculate his distance from it even approximately, but it *looked* enormous.

How long had his nap lasted? The spacesuit's chronometer was running. Its minute hand indicated 37; its hour hand, 15; its day hand, 3. That would have told him how long he'd slept, if he'd read the chronometer before he went to sleep; but he hadn't. All he knew was that he'd slept much longer than he'd expected, and long enough to get painfully stiff.

In any case, he'd covered a lot of distance. As much as the *Tang* would have covered in the same time, he realized. He was approaching Earth pretty fast.

"Too fast," he added aloud, nervously. He'd have to decelerate before he got there or the parachute wouldn't do him any good. Now, was it time yet to start decelerating? If he directed the hand reaction motor in the wrong direction now, could it cause him to miss Earth? He guessed not: the planet looked so close, any small "sidewise" push he gave himself could hardly hurt. Once he killed his speed, Earth's gravitational field would gather him in.

Pappas took out the reaction motor. Using low power, he turned himself till he faced Earth. The planet seemed to have swelled just in the time since he'd waked up. He set the reaction motor to full power, grasped it with both hands, held it in front of his chest, and pointed it straight at Earth. Then he pressed the button and held it down.

The force of the hand jet pushed in at his midriff, made his legs and head swing forward. Well, that was okay as long as they didn't get into the exhaust. He stopped blasting a moment to get a better grip on the reaction motor, then fired continuously. Occasionally he would find he'd started himself spinning; then he'd shift the motor just a trifle to keep himself facing the planet. He kept the button firmly pressed down, and the cylinder

in his hands sent a continuous jet of intense blue toward Earth. When the first fuel cartridge was exhausted, he put in the second and kept it up.

Twice he stopped for a food pellet and a little water. The rests were welcome: his arms and chest were stiff and aching. But he didn't rest long, because he was getting really scared now. He was sure he was dangerously close to his destination, and his speed hadn't been cut enough. The continents and oceans of Earth's day side were clearly visible, and grew noticeably larger as he looked at them.

He now thought of the direction he was going as *down*; he thought of himself as *falling*.

Something bothered him: America had not been in sight a while ago, but now he could see a corner of Brazil appearing at the edge of the disk of Earth. Did that mean he was passing by Earth instead of falling straight at it? No, he realized in a moment, it just meant Earth was rotating; for he could see that the sunset line, the line between night side and day side, had not changed its apparent position on the disk.

No, he was still falling. And he was *falling too fast*.

A suspicion began to form that Birkerod and Garcia *had* anticipated this. And suddenly, terrifyingly, he thought of what Garcia's last remark might have meant!

Still, they'd said there was a way he could save himself. And the only way he could think of was to break his fall. He had a certain quantity of fuel to do it with, and he was using it. He was using it for all it was worth, no matter how much his body ached with fatigue. If those two on the *Tang* had figured this all out ahead of time, then they must have left him enough fuel to avoid being killed. Otherwise they might as well have shot him on the *Tang*. Okay, if he had enough fuel he'd use it all.

One after another the fuel cartridges burned out. Pappas longed for another rest, but he didn't dare take one now. He kept firing, and still the Earth kept growing larger and brighter below him. Finally, there was no more fuel.

After a short breather, Pappas took the reaction motor, detached it from the cord which bound it to his spacesuit, and flung it downward with all his strength. Then he did the same with the mirror, the searchlight, and the reel of cable. It was all he could do.

Then there was an instant when he saw where he had gone wrong. He had not had enough fuel to do what he'd tried to do. That was clear by one look at Earth's face, which still grew alarmingly fast below him; and he could probably have figured it out before. But there had been a way which *would* have given him some chance. He should have used his fuel, not in a hopeless attempt to decelerate, but in deflecting himself so he would miss Earth! He would have passed by Earth, relatively close. He'd have passed fast, but not too fast to signal with his mirror to Earth's several satellites, natural and artificial. The spaceports on those satellites kept twenty-four-hour watches for signals of distress; when they saw a faint blinking light they would send out a ship which would try to locate its source. They were good at it, too, and if he'd kept his mirror spinning they might have picked him up.

But he hadn't thought of it. It had never occurred to him that even when he was alone, as thoroughly alone as anyone can ever be, his life could depend on dozens of other people. He'd thought only of reaching safety by himself. And, seeing only the one possibility, he'd played it blindly.

There was that instant of sickening realization, then a little later came an instant when Earth ballooned out grotesquely below him, suddenly filling most of his field of vision, and he saw lakes, islands, deserts. He felt all over him an abrupt, final flash of heat, and *Nick Pappas became a meteor.*

START: FULL LICENSE

THE FULL PROJECT GUTENBERG™ LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg™ mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase “Project Gutenberg”), you agree to comply with all the terms of the Full Project Gutenberg License available with this file or online at www.gutenberg.org/license.

Section 1. General Terms of Use and Redistributing Project Gutenberg electronic works

1.A. By reading or using any part of this Project Gutenberg electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. “Project Gutenberg” is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation (“the Foundation” or PGLAF), owns a compilation copyright in the collection of Project Gutenberg electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is unprotected by copyright law in the United States and you are

located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg mission of promoting free access to electronic works by freely sharing Project Gutenberg works in compliance with the terms of this agreement for keeping the Project Gutenberg name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg work. The Foundation makes no representations concerning the copyright status of any work in any country other than the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg License must appear prominently whenever any copy of a Project Gutenberg work (any work on which the phrase “Project Gutenberg” appears, or with which the phrase “Project Gutenberg” is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere in the United States and most other parts of the world at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project GutenbergTM License included with this eBook or online at www.gutenberg.org. If you are not located in the United States, you will have to check the laws of the country where you are located before using this eBook.

1.E.2. If an individual Project Gutenberg electronic work is derived from texts not protected by U.S. copyright law (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase “Project Gutenberg” associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg work in a format other than “Plain Vanilla ASCII” or other format used in the official version posted on the official Project Gutenberg website (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original “Plain Vanilla ASCII” or other form. Any alternate format must include the full Project Gutenberg License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg electronic works provided that:

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg™ License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg™ works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg™ works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg™ electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from the Project Gutenberg Literary Archive Foundation, the manager of the Project

Gutenberg™ trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread works not protected by U.S. copyright law in creating the Project Gutenberg™ collection. Despite these efforts, Project Gutenberg™ electronic works, and the medium on which they may be stored, may contain “Defects,” such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the “Right of Replacement or Refund” described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg™ trademark, and any other party distributing a Project Gutenberg™ electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to

you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg™ electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg™ electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg work, (b) alteration, modification, or additions or deletions to any Project Gutenberg work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg

Project Gutenberg is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the

efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg's goals and ensuring that the Project Gutenberg collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at www.gutenberg.org.

Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non-profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's business office is located at 41 Watchung Plaza #516, Montclair NJ 07042, USA, +1 (862) 621-9288. Email contact links and up to date contact information can be found at the Foundation's website and official page at www.gutenberg.org/contact

Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg™ depends upon and cannot survive without widespread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine-readable form accessible by the widest array of equipment

including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit www.gutenberg.org/donate.

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: www.gutenberg.org/donate.

Section 5. General Information About Project Gutenberg electronic works

Professor Michael S. Hart was the originator of the Project Gutenberg concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg eBooks with only a loose network of volunteer support.

Project Gutenberg eBooks are often created from several printed editions, all of which are confirmed as not protected by copyright in the U.S. unless a

copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our website which has the main PG search facility:
www.gutenberg.org.

This website includes information about Project Gutenberg, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
